USERS MANUAL

Integrated Management of Transboundary Danube – WATER

MODULE EXTERNAL PORTAL (UMBRACO Platform)

Contents:

1. PURPOSE 3

2. USED TERMS 3

3. EXTERNAL ADMINISTRATION PORTAL 4

3.1. EXTERNAL ACCESS PORTAL 4

3.2. STATIC CONTENT MANAGEMENT SECTIONS 8

3.2.1. ADD CONTENT STATIC SECTION INTO PORTAL 8

3.2.2. MODIFIED CONTENT STATIC SECTION INTO PORTAL 11

3.2.3. ERASE/ UNPUBLISH CONTENT STATIC SECTION 13

3.2.4. PUBLISH CONTENT OF THE STATIC SECTION INTO PORTAL 16

3.3. SECTION FORUM FROM THE PORTAL 20

3.3.1. ADD AND PUBLISH NEW TOPIC IN SECTION FORUM FROM PORTAL 20

3.3.2. ADD AND PUBLISH COMMENTS INTO SECTION FORUM 25

3.4. ADD AND PUBLISH COMMENTS ON AN ARTICLE/ DOCUMENT ON THE EXTERNAL PORTAL . 28

3.5. ADD AND PUBLISH CONTENT MULTIMEDIA ON THE EXTERNAL PORTAL 32

4. CONTENT MANAGEMENT WEBSITES 34

4.1. ADD CONTENT OF DIFFERENT BULGARIAN WEBSITES 34

4.1.1. DELETE SECTION FROM OTHER BULGARIAN WEBSITES 39

4.1.2. DEFINITION AND PUBLISHING SITE MAP 41

4.1.3. MOVE CONTENT WEBSITE INTO EXTERNAL PORTAL 43

4.2. ADD AND PUBLISH CONTENT IN ENGLISH/ BULGARIAN 46

5. USERS MANAGEMENT ON THE PORTAL 53

5.1. CREATE NEW USER ACCOUNT 53

5.2. MODIFY USER PARAMETERS 57

5.3. DISABLE/ DELETE USER FROM PORTAL 59

6. EXTERNAL PORTAL AUDIT 62

6.1. PREVIEW CONTENT CHANGES FROM PORTAL 62

6.2. VIEW PREVIOUS VERSION OF THE PORTAL 65

6.3. ROLLBACK PREVIOUS VERSION CONTENT OF THE EXTERNAL PORTAL 68

6.4. CONSULTATION LOGIN AUDIT 71

7. ENVIRONMENTAL HEALTH MAP 73

8. KEYSTROKE ACCESS 75

1. PURPOSE

The document is the User Manual Application "Integrated Management of Transboundary Danube - WATER" and serves as a tool for understanding the application functionalities and operating mode with it.

2. USED TERMS

The used terms in the document are:

- **Username** – refers to the person who works with the software – WATER;
- **System** – refers to the integrated border management – WATER, upon the whole;
- **Error message** – message display system which sends the user that are blocking errors that cause workflow;
- **Warning message** - message displayed to the user system that transmits certain conditions were not met; workflow may be followed by further;
- **Information Message** - Message display system which guides the user application usage;
- **Date –** date generic name or personal information specialist, registered in the system for a user;
- **Portal** - the architecture of a website, which contains data, developed domain-specific features;
- **Task** – executing the workload assigned to a user (in our case, workflows with three intermediate phases);

3. EXTERNAL ADMINISTRATION PORTAL

The common elements are common application by all application users, regardless of the role that it has.

3.1. EXTERNAL ACCESS PORTAL

When accessing external link portal properly, it displays the window in which the user is prompted to enter a username and password.
Each user will have own username and password.

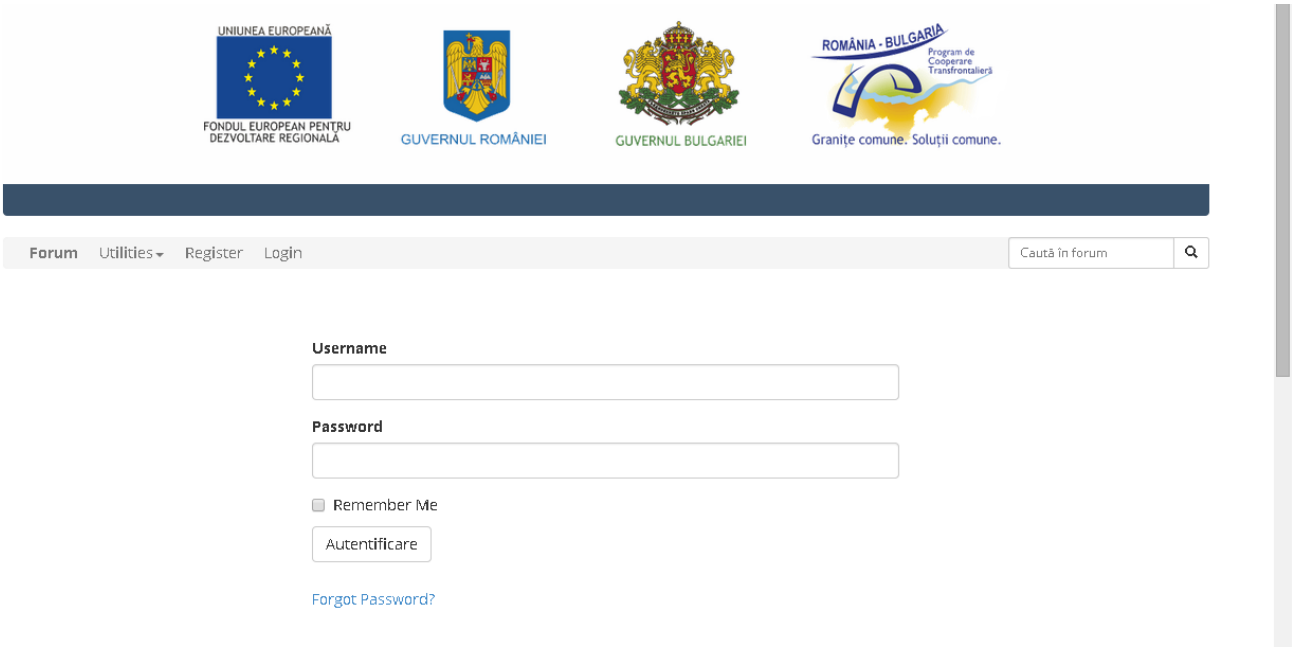

Figure 3.1- 1 – The Authentication

The user enters a valid user name and password assigned by the system administrator. After clicking the Login, the system checks the data entered and if a user error, error message on the screen.

Password is confidential and must not be disclosed to anyone, because each event (task, document editing, etc.) in the system is assigned a unique user.
If the username and / or password is entered incorrectly, the system displays the warning message: "Unable to login."

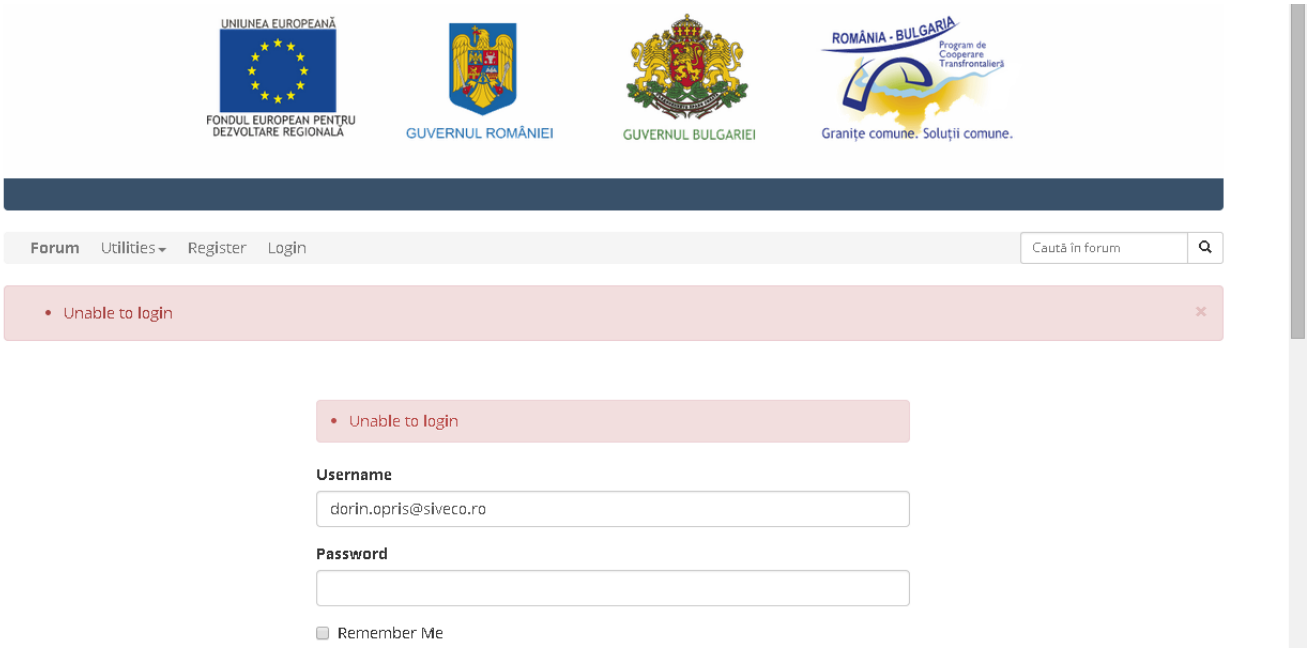

Figure 3.1–2 – Warning message username / password

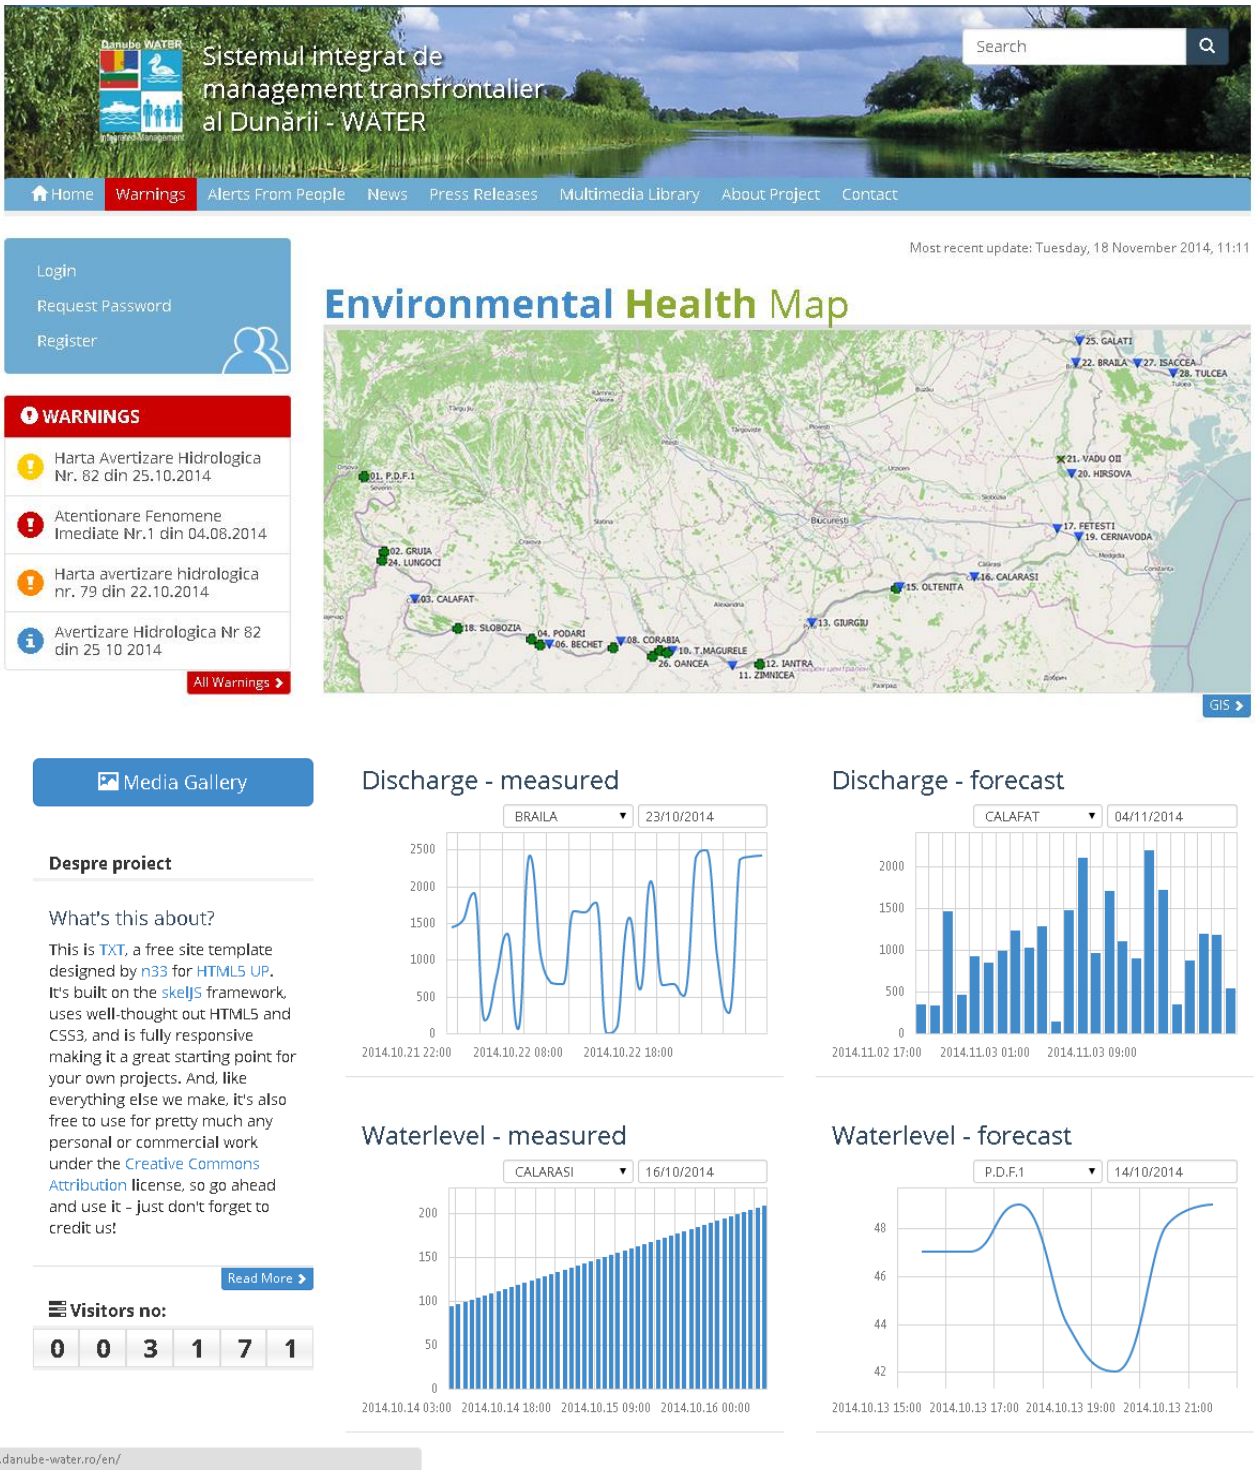
If the password and username were entered correctly, the system will generate the following screen:



Sistemul integrat de management transfrontalier al Dunării - WATER

Despre proiect
What's this about?
This is TXT, a free site template designed by n33 for HTML5 UP. It's built on the skelJS framework, uses well-thought out HTML5 and CSS3, and is fully responsive making it a great starting point for your own projects. And, like everything else we make, it's also free to use for pretty much any personal or commercial work under the Creative Commons Attribution license, so go ahead and use it - just don't forget to credit us!

Figure 3.1 - 3 Home Page

Following validation of the data entered, the user is allowed to access external data portal.

The system opens the first page "Home" external portal viewed in the images above.

The main screen (WATER) contains the list of major sections that compose the external portal, as follows:

1. Home;
2. Warnings;
3. Alerts from people
4. News;
5. Press Releases;
6. Multimedia Library;
7. About Project;

8. Contact.

3.2. STATIC CONTENT MANAGEMENT SECTIONS

3.2.1. ADD CONTENT STATIC SECTION INTO PORTAL

External portal allows adding content (article, news, alerts, warnings etc.) in the static {News / Press Releases / Alerts from people / Warnings / Multimedia Library} sections.

The user is connected to the platform and has rights to edit / add content on external portal. User accesses external link portal administration. The system displays the login page for the external portal administration. The user authenticates the login page to manage external portal.

The check credentials and after validation main page displays external management portal.

User accesses static section – News, that wants to add content. The system displays static section selected by the user, as shown below:

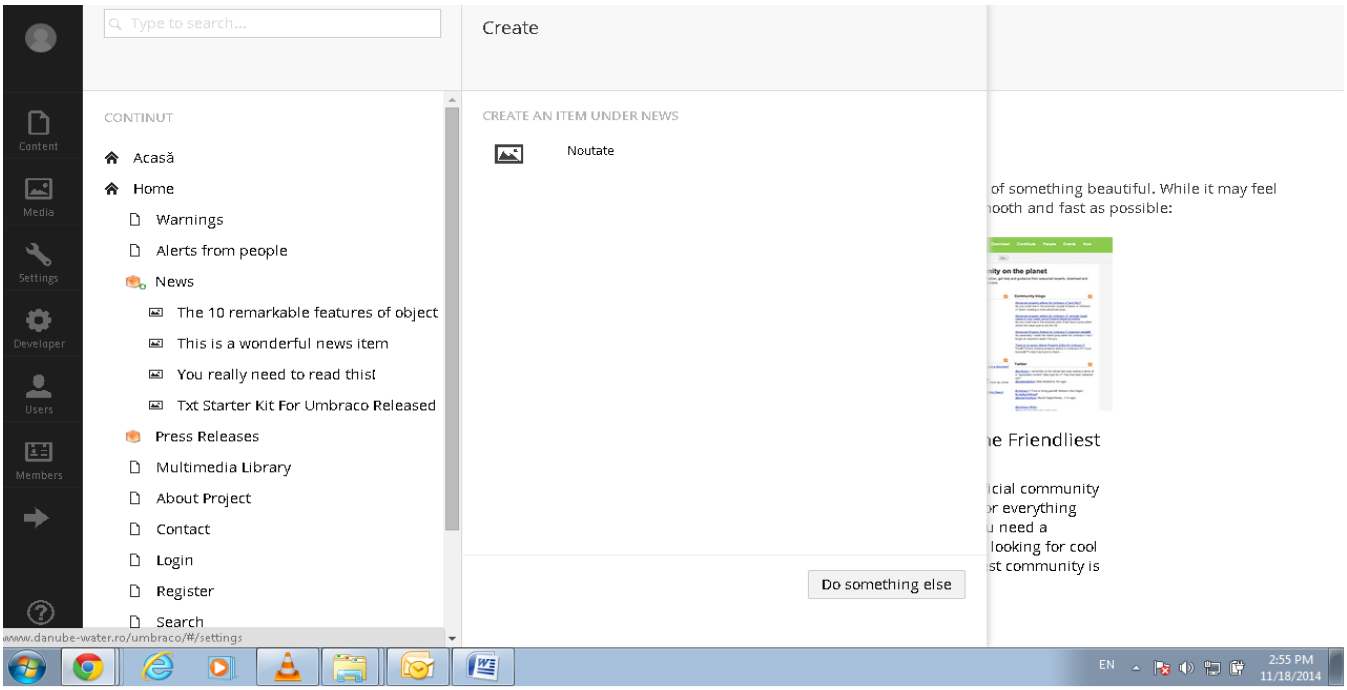

Figure 3.2.1 - 1 – Static Section - News

The user chooses to add a new record static section "News" chosen. The system displays the Add Content page for the new record.

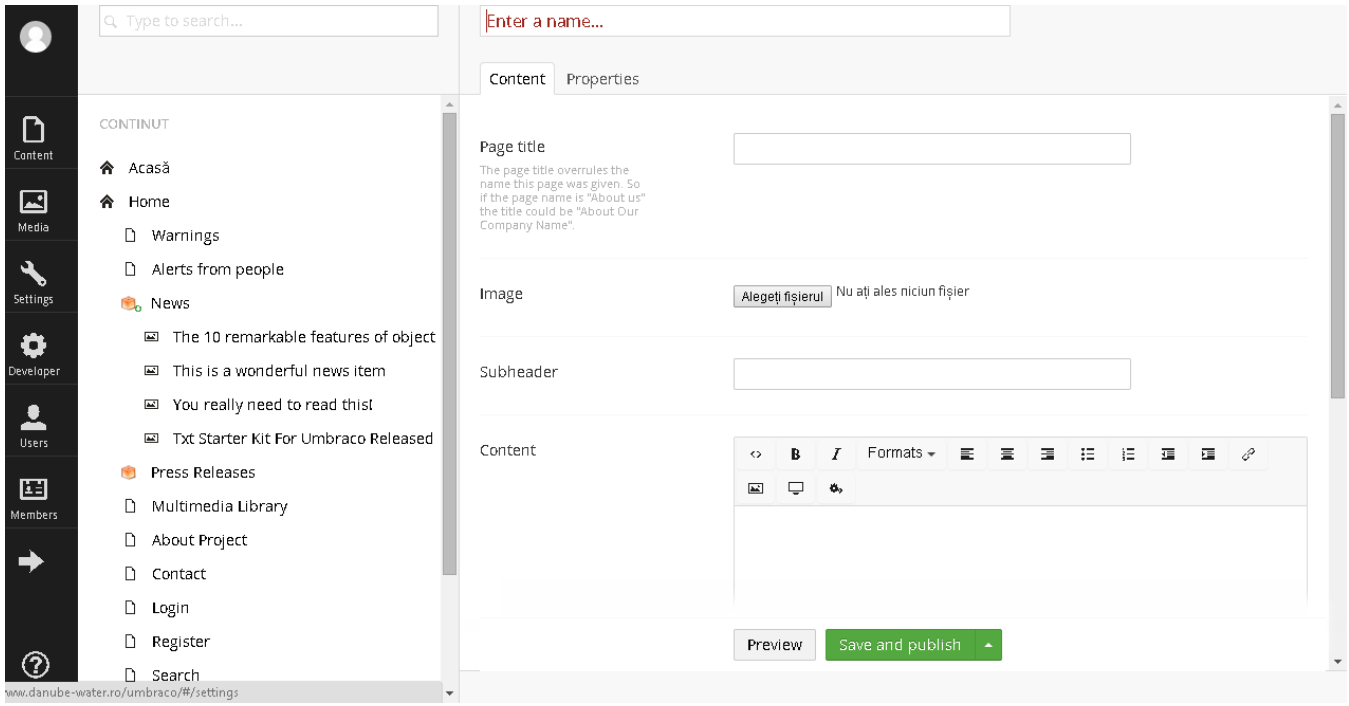

Figure 3.2.1 - 2 – Create new entry in the section News

The user completes and saves the information about the new record: title, page title, attach images, sub header, content and press Save and Publish button.
The user may choose to preview the content added by pressing the preview.
The preview functionality shows content added.

Figure 3.2.2 - 1 – Modified content into a static section

The user modify the selected record appropriate information and saves it by clicking on Save and Publish button.
The system saves the information entered.
The user may choose to preview the contents of the record changed.
The preview displays the modified content.

3.2.3. ERASE/ UNPUBLISH CONTENT STATIC SECTION

External portal allows removing / unpublished content (article, news, reporting, warning, etc.) in the static {News / Press Releases / Alerts from people / Warnings / Home} sections. The user is connected to the platform and has rights to edit/ add/ delete content on external portal. User accesses external link portal administration. The system displays the login page for managing external portal. The user authenticates to the login page for managing external portal.

The check credentials after validation displays management portal main page externally. The user chooses the static section of which wants to delete / unpublished content. The static section displays user selected.

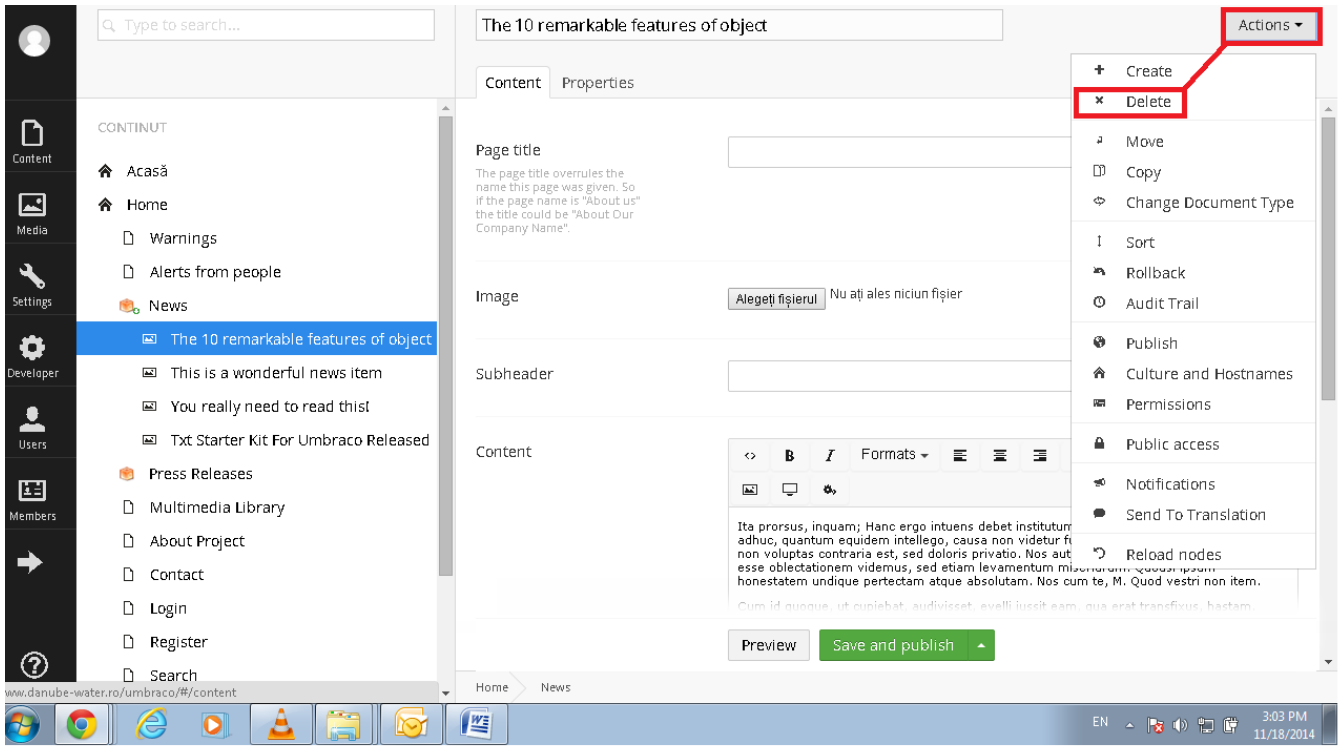

Figure 3.2.3 - 1 – Delete news from static section

The user chooses a record that wants to delete/ unpublished static section of the portal. The page displays the selected entry.

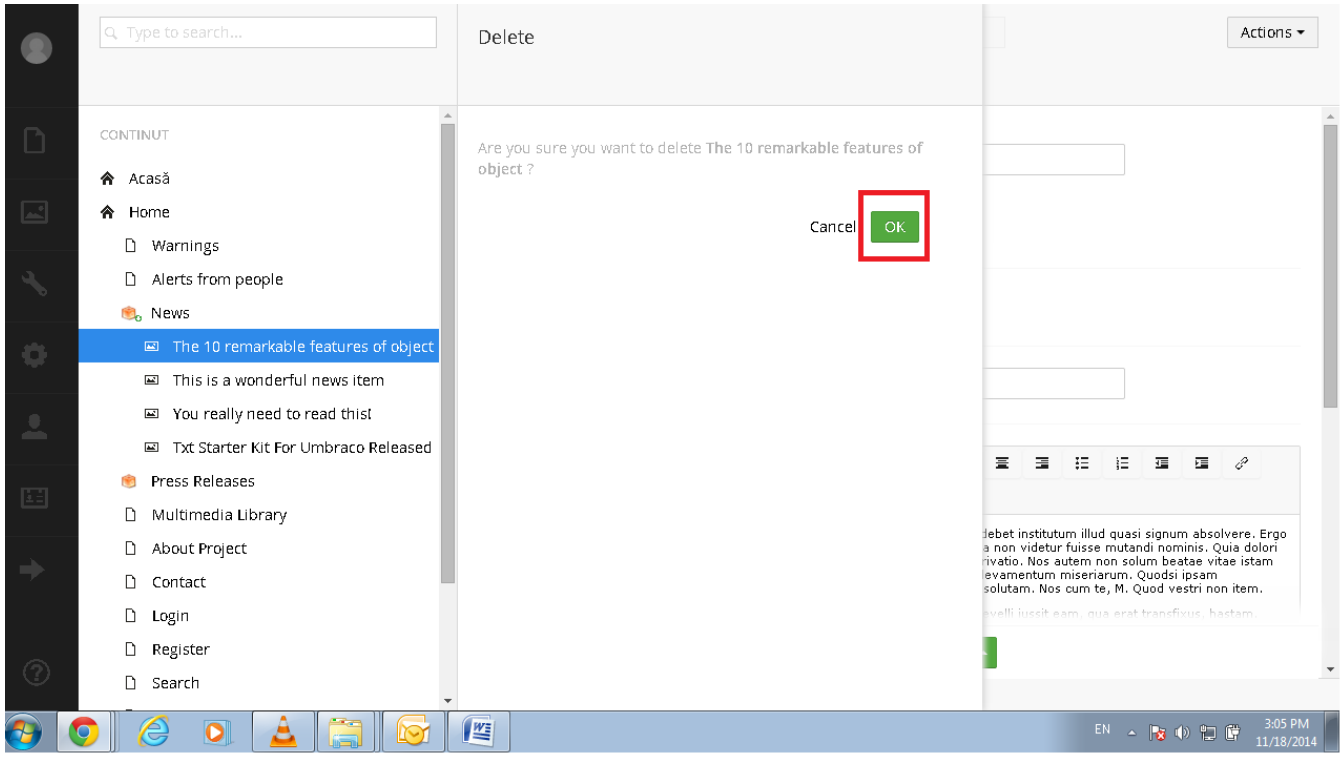

Figure 3.2.3 - 2 – Delete/ Unpublished content static section from portal

The user chooses the option to delete / unpublished and confirm the action. System delete / unpublished the selected entry by pressing on the OK button.

Registration disappears from the tree structure of the external portal.

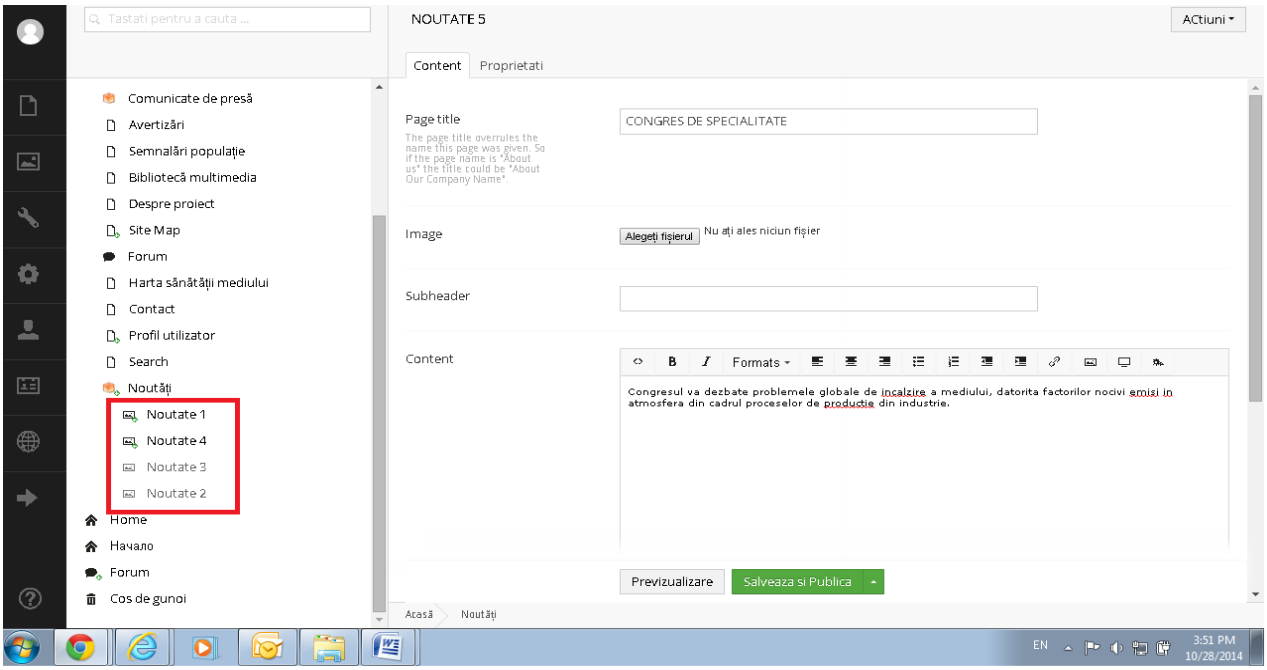

Figure 3.2.3 - 3 – Result of the system

Information is deleted from the external portal and is available for consultation in the "Recycle Bin" as you can see in the picture below:

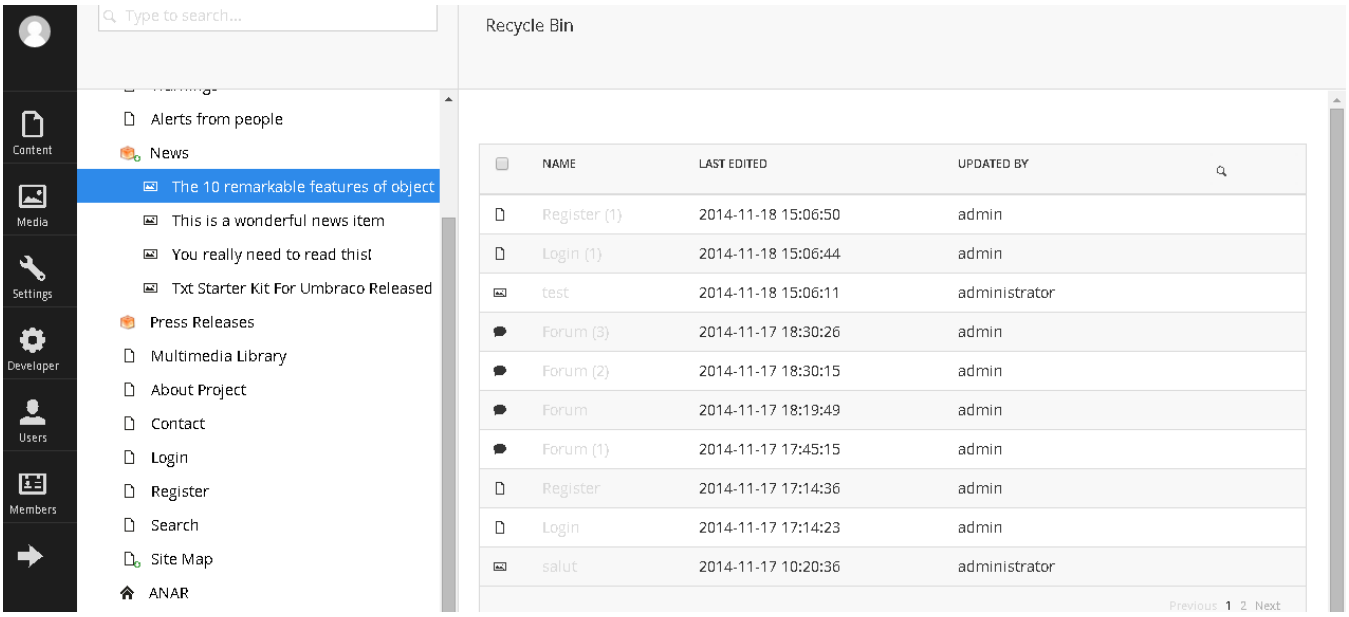

Figure 3.2.3 - 4 – Content removed from the external portal into the Recycle Bin

3.2.4. PUBLISH CONTENT OF THE STATIC SECTION INTO PORTAL

External portal allows publishing content (article, news, alerts, warning etc.) in the static {News/ Press Releases / Alerts from people / Warnings /Home} sections.
The user is connected to the platform and has rights to edit / add content on external portal. User accesses external link portal administration. The system displays the login page for the external portal administration. The user authenticates the login page to manage external portal.

The check credentials and after validation main page display external management portal.

The user chooses the static section (Press Releases) in which want to publish content. The system displays user selected static section.

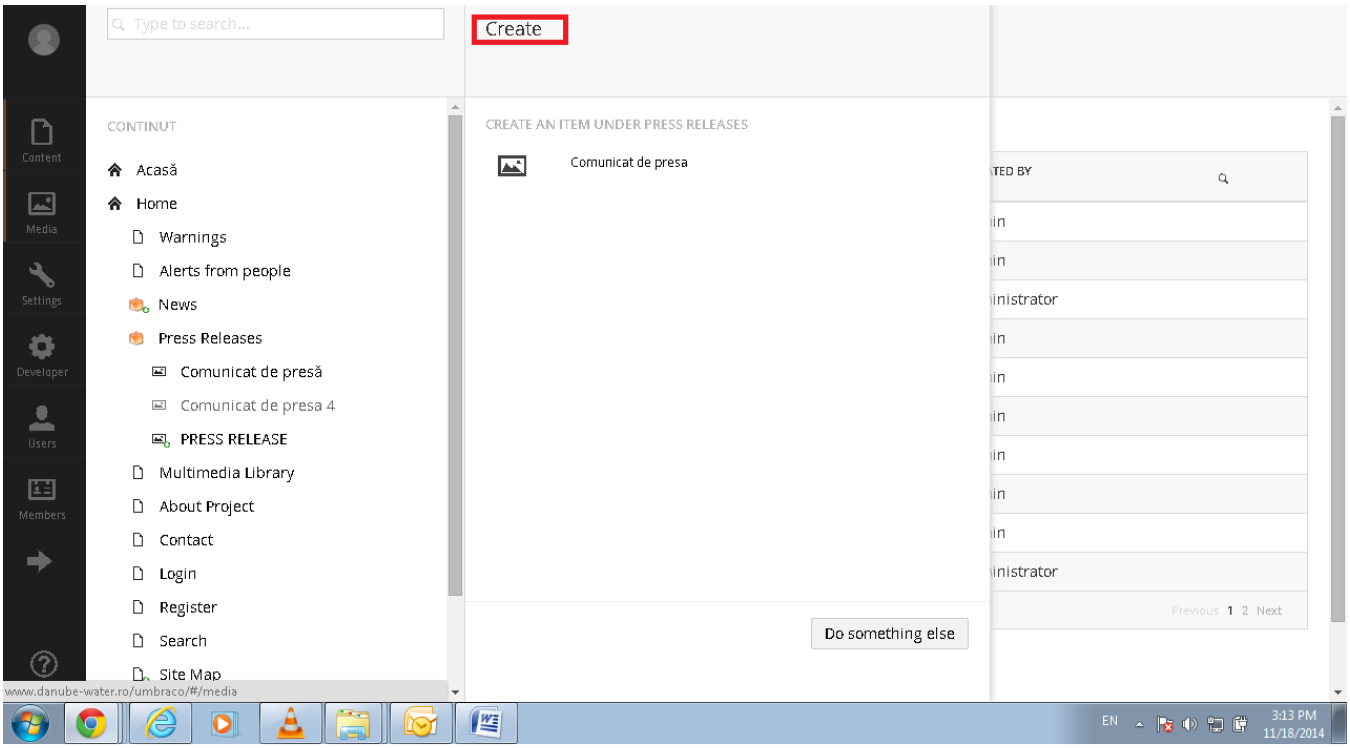

Figure 3.2.4 - 1 – Create New Press Release on the portal

The user will create a new press release and will publish on the portal. The page displays the selected entry. The user completes the corresponding registration dates that will be published by clicking on Save and Publish button. The system saves the information entered.

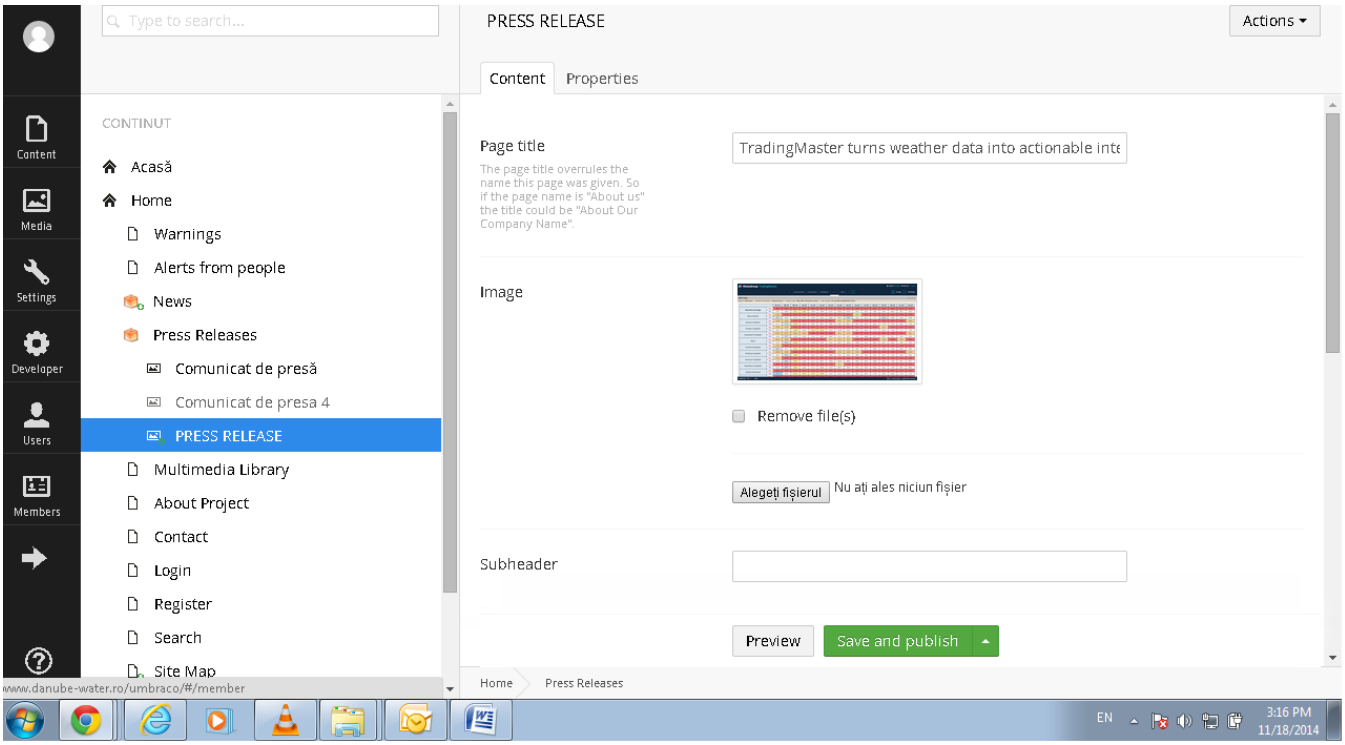

Figure 3.2.4 - 2 – Complete data for Press Release on the portal

The user chooses the option to preview the content saved. The system shows the content.

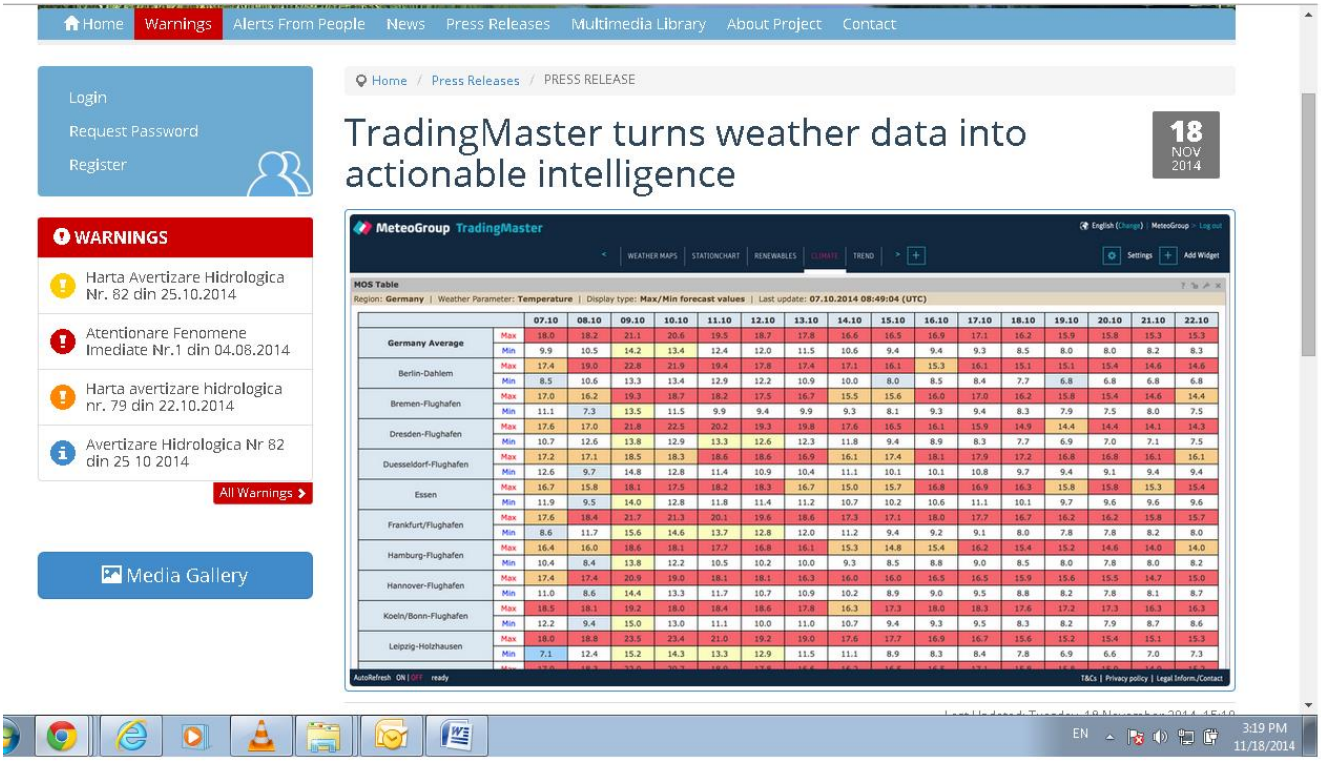

Figure 3.2.4 - 3 – Preview a Press Release on external portal.

Information is published and is available for consultation in external portal.

3.3. SECTION FORUM FROM THE PORTAL

3.3.1. ADD AND PUBLISH NEW TOPIC IN SECTION FORUM FROM PORTAL

External portal offers the general public (citizens and businesses) access to a section of the forum on the issues addressed in the project.
An administrator user is connected to the platform and have right to publish content on external portal.
An administrator user accesses external link portal administration. The system displays the login page for the external portal administration. The user authenticates the login page to manage external portal.

The user chooses the desired Forum section to add new themes. The system displays window Forum. The user may choose to add a new topic in Forum section. The system displays the page for adding new topics in Forum.

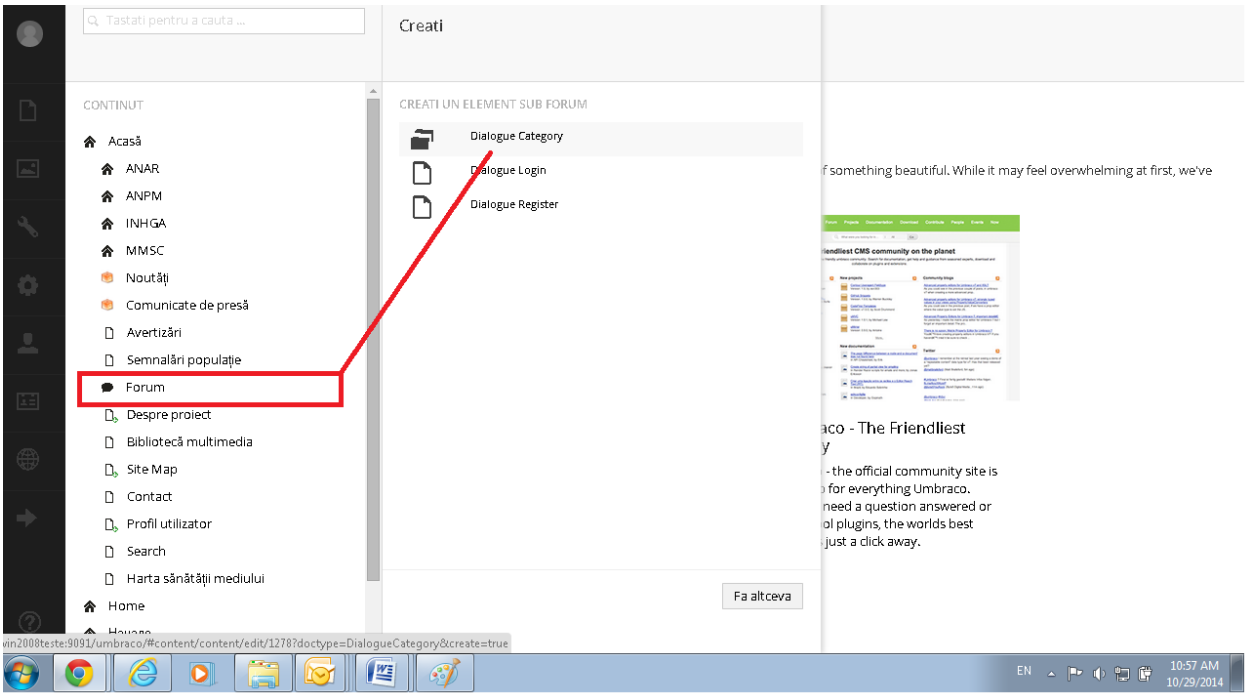

Figure 3.3.1 - 1 – Section Forum

The user completes the information about the new theme and save them.

The system saves the information into the message.

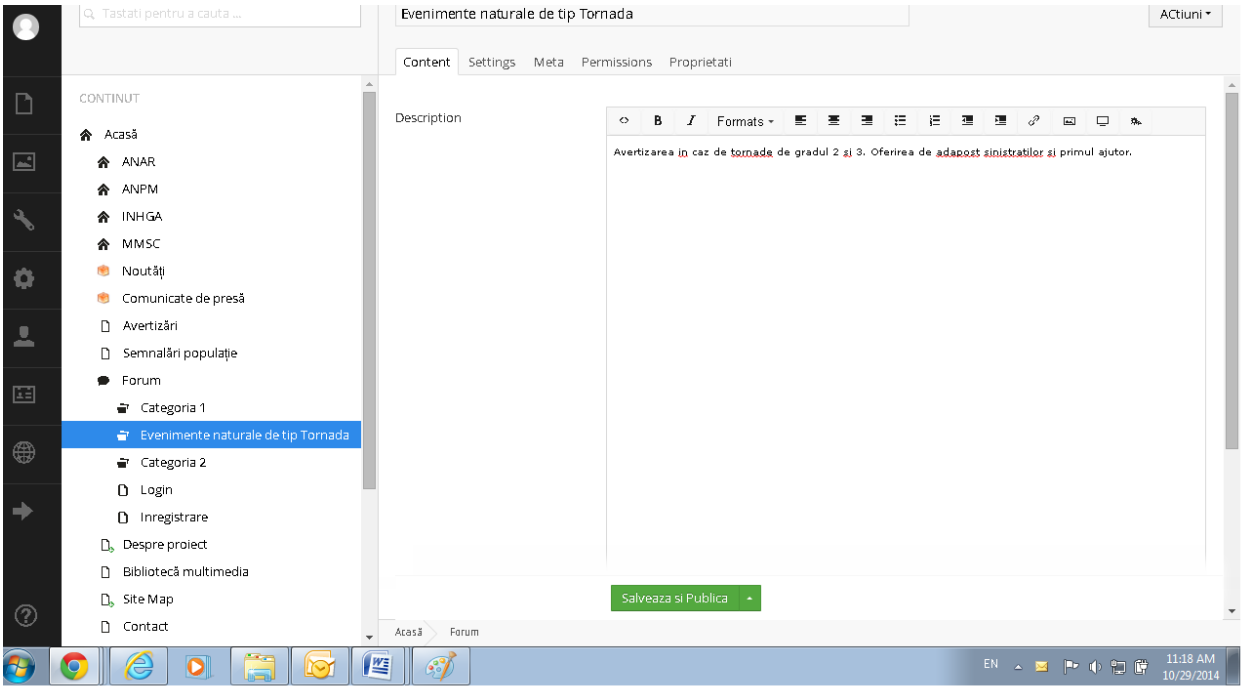

Figure 3.3.1 - 2 – Complete data for new topic in section Forum

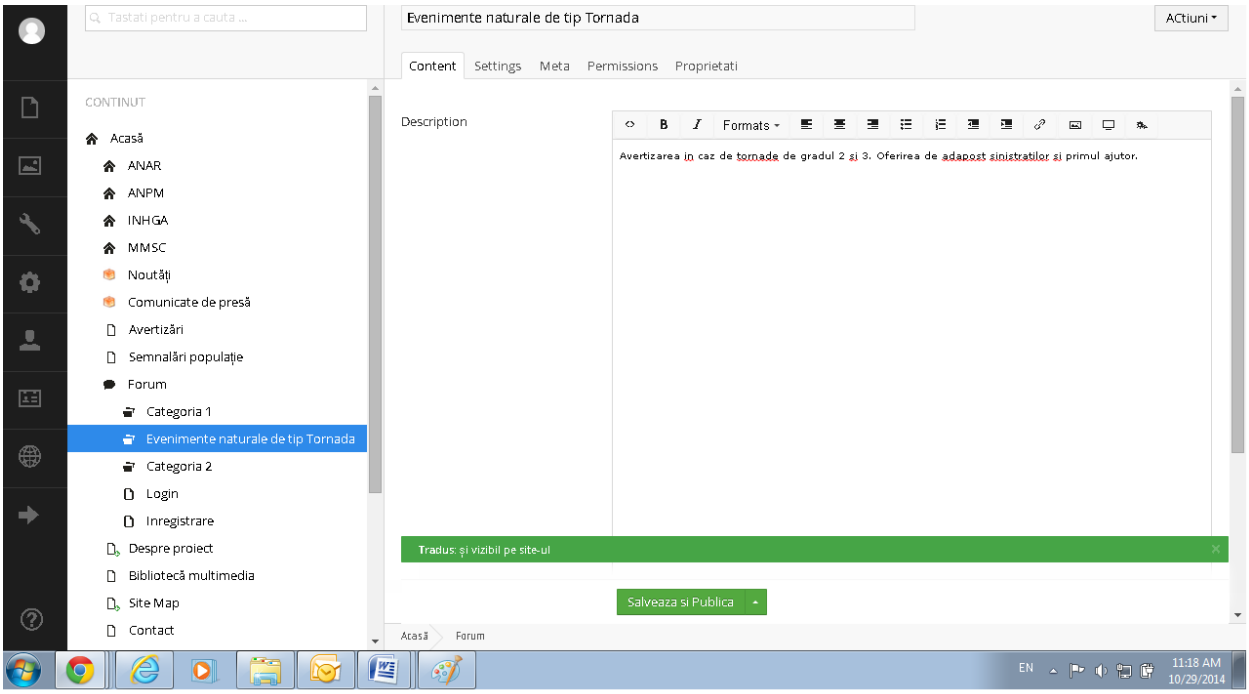

Figure 3.3.1 - 3 – Save dates from new topic for section Forum

The user chooses to publish content added by pressing Action button, and then the public option.

Content was posted new topics in public area of the external portal.

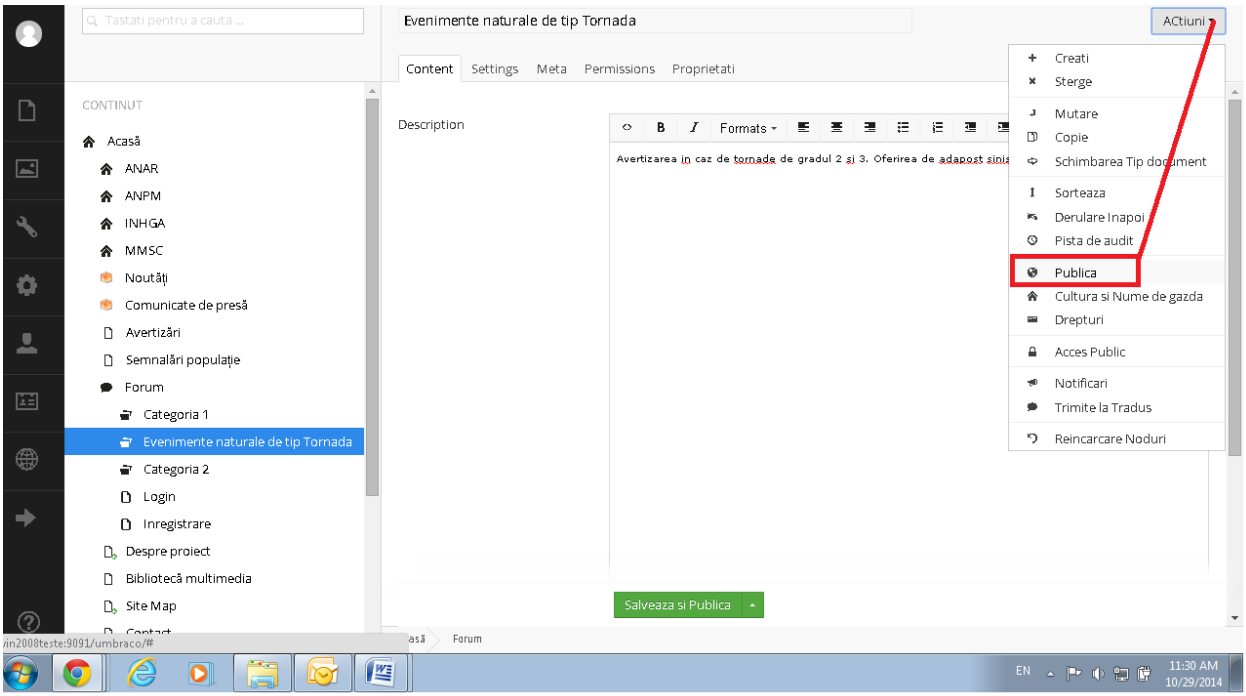

Figure 3.3.1 - 4 – Publish new topic in section Forum

An administrator user set permissions to external users (citizens or companies) to add comments to the proposed theme from Forum. Access Permissions tab and check boxes:

- Attach Files;
- Create Polls;
- Create Posts.

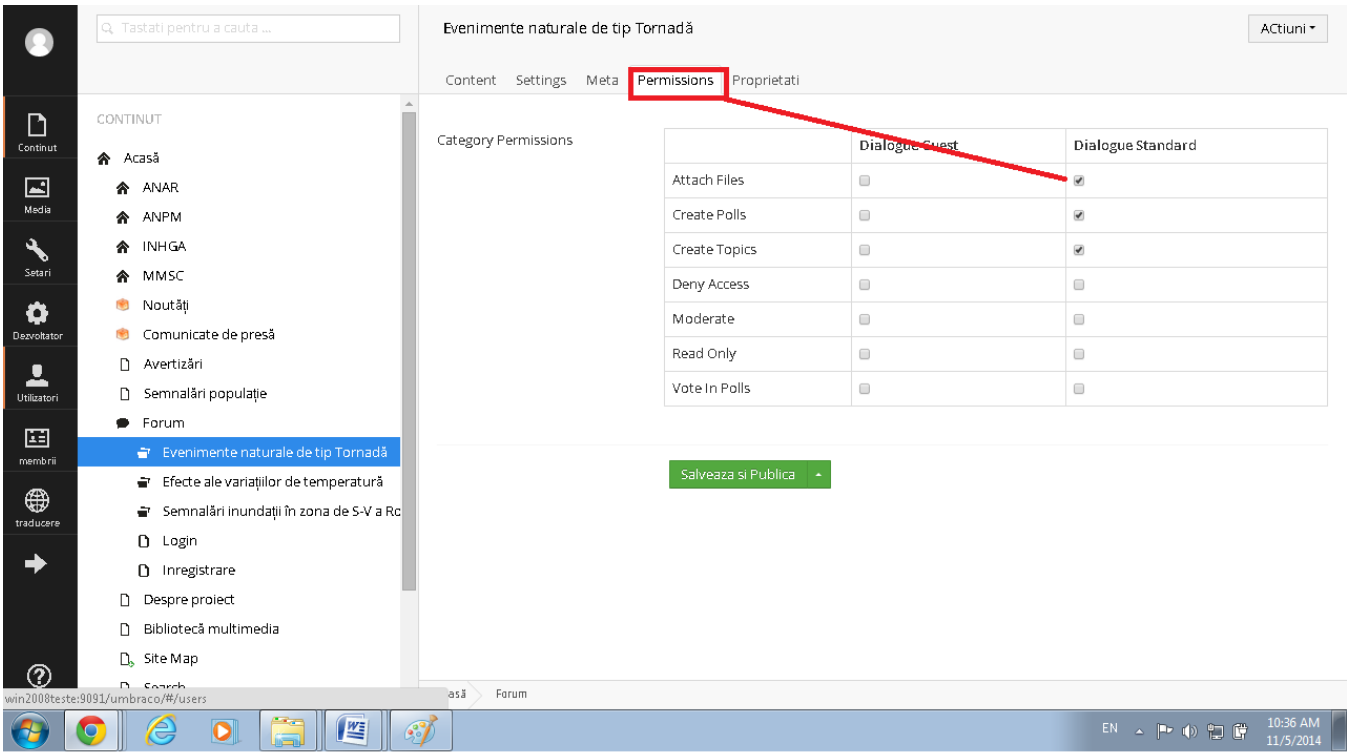

Figure 3.3.1 - 5 – Set access permissions to users into the Forum topic

The user may choose to preview the contents of added base. The system displays the preview content. New topic in Forum section is added and published in the public and available for consultation.

3.3.2. ADD AND PUBLISH COMMENTS INTO SECTION FORUM

External portal provides citizens and companies access to a section of the forum on the issues addressed in the project. In a thematic forum, the administrator can add comments. The user is connected to the platform and have right to publish content on external portal. User accesses external link portal administration. The system displays the login page for managing external portal. The user authenticates to the login page for managing external portal.

The user chooses the theme of the forum wants to add a comment. The system displays the selected theme.

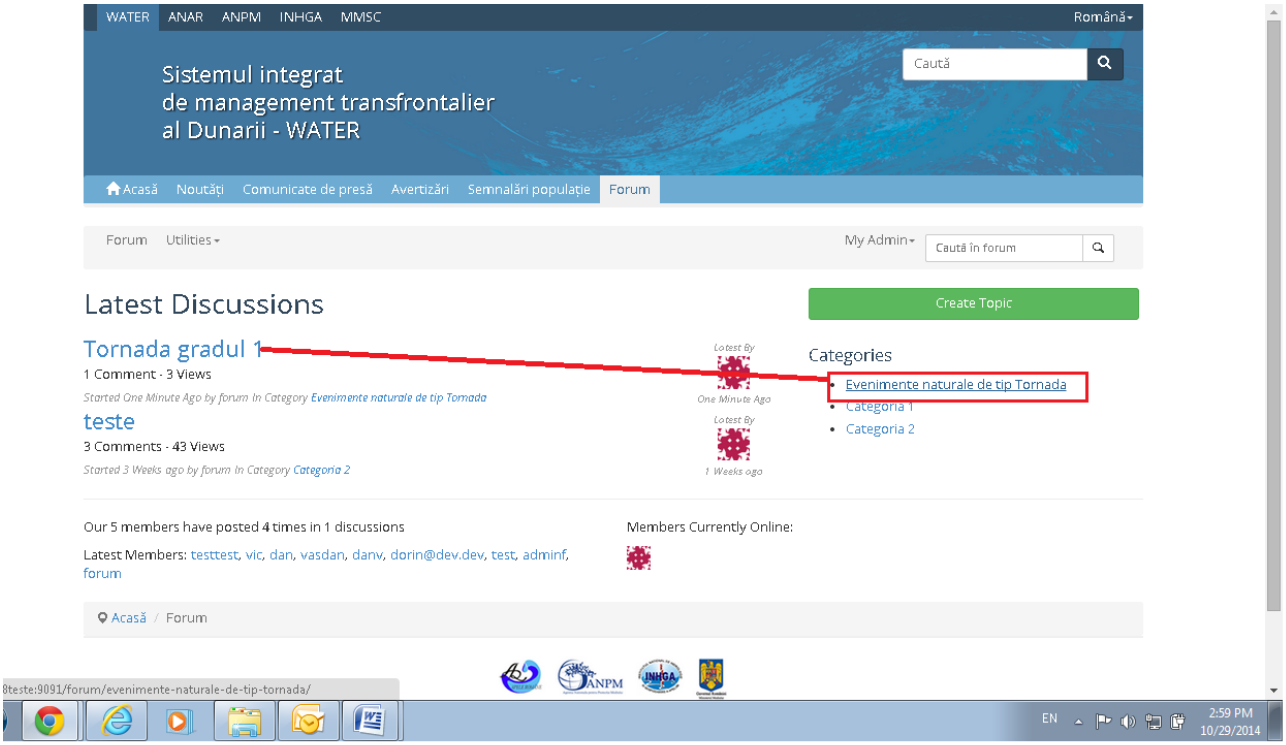

Figure 3.3.2. - 1 – The theme selected from the Forum section

External users (citizens or companies) on a topic by topic add a new comment, pressing the **Create Topic** button.
The page displays add new comment.

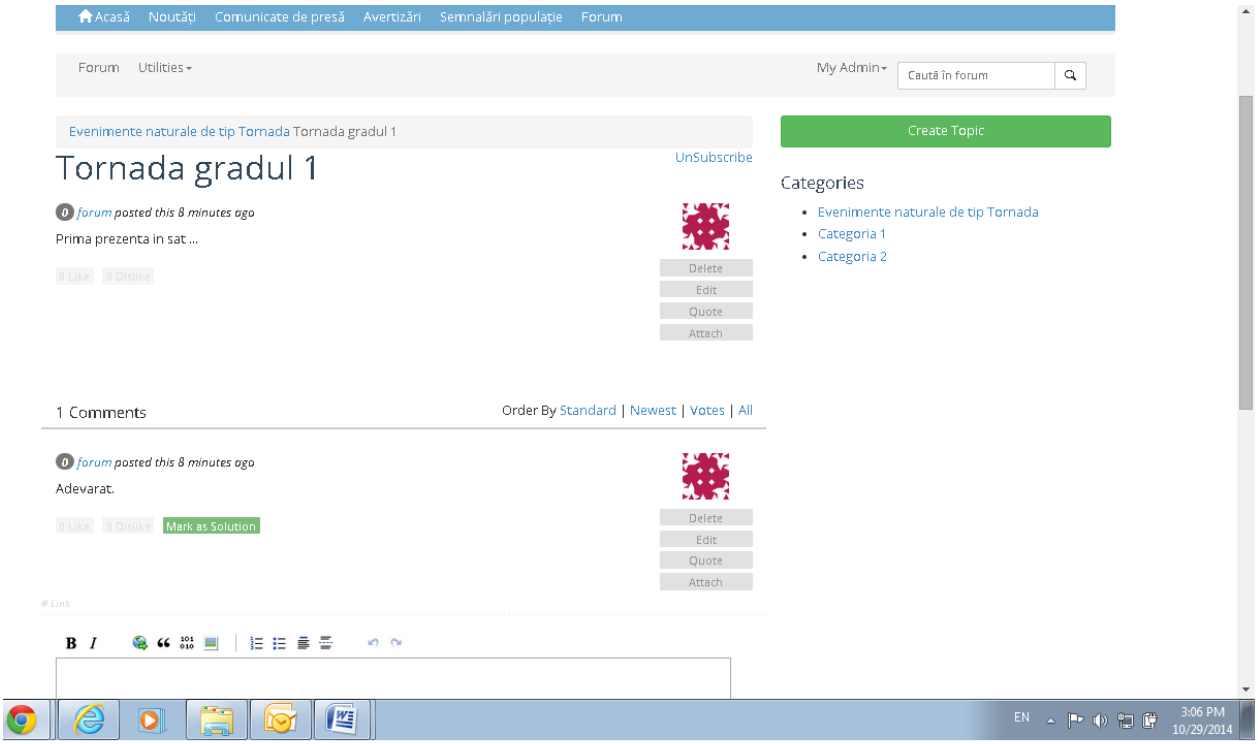

Figure 3.3.2. - 2 – Add comment in the forum selected theme

The user completes the appropriate information and click Create Post. The system saves and publishes information added comment.
Comments added to the Forum, on a certain theme, are published in the external portal and are available for consultation.

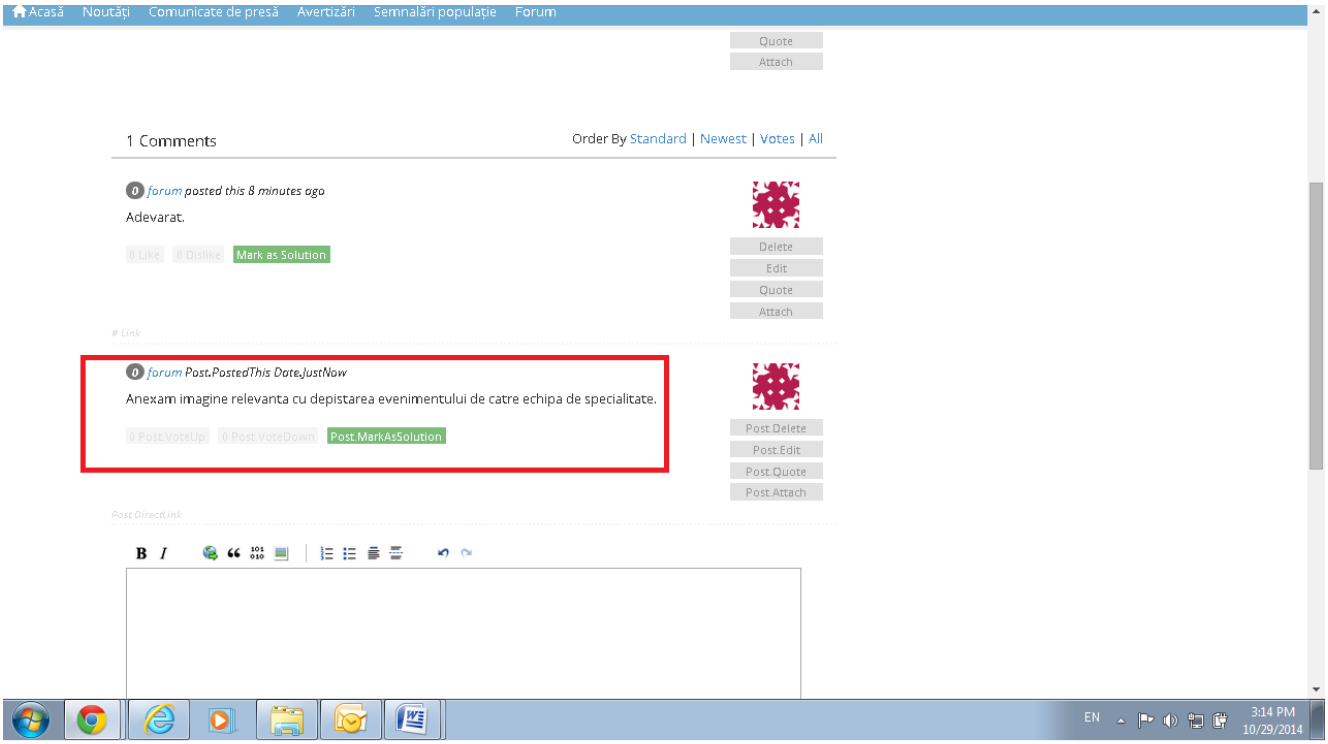

Figure 3.3.2. - 4 – Message posted into the forum section

3.4. ADD AND PUBLISH COMMENTS ON AN ARTICLE/ DOCUMENT ON THE EXTERNAL PORTAL

External portal allows publishing documents by administrators, directly or approval flow. These documents must allow the takeover of comments after they have been published where appropriate. Portal administrators can turn to add a comment on an article / document published. The user is connected to the platform and has the right to edit / publish content on external portal. User accesses external link portal administration. The system displays the login page for the external portal administration. The user authenticates the login page to manage external portal.

The user selects the desired section to add and public comment. The system displays the selected section.

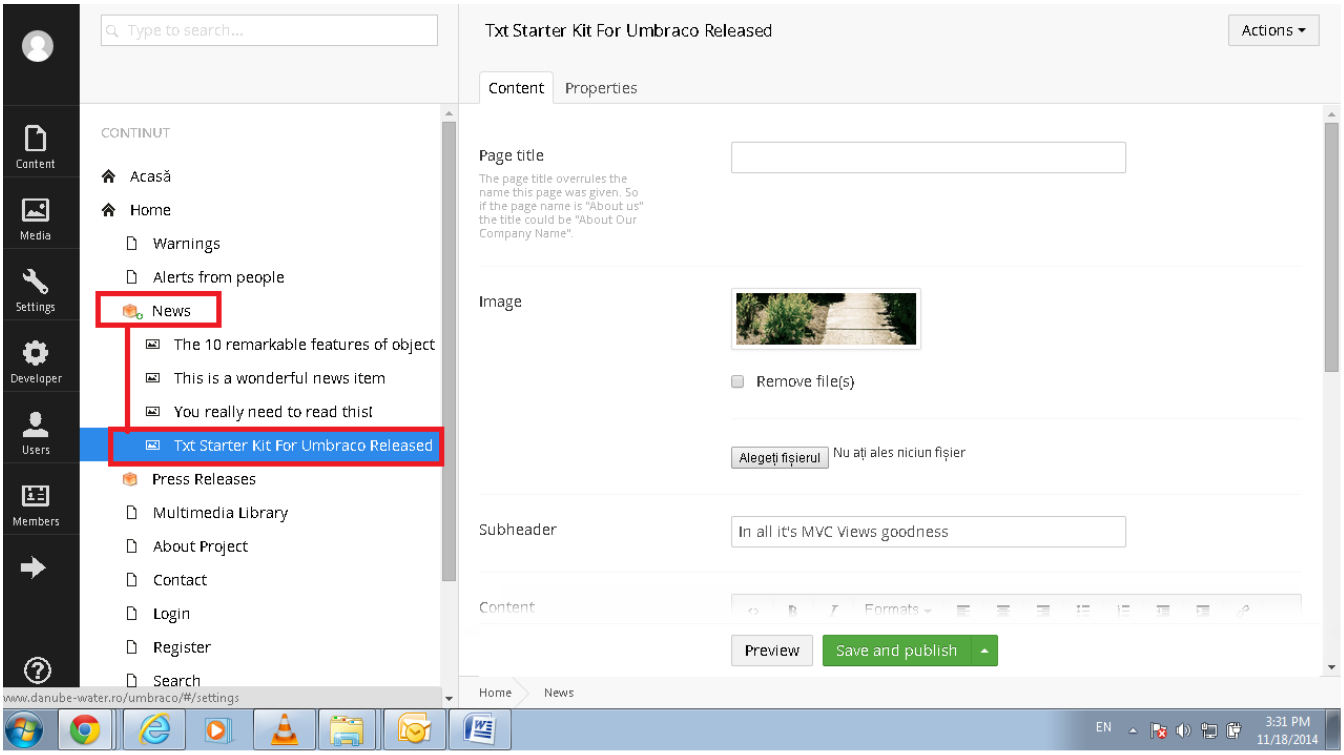

Figure 3.5. - 1 – Section News

The user selects an article/ document, add a comment and save information added.

The system saves the added comment.

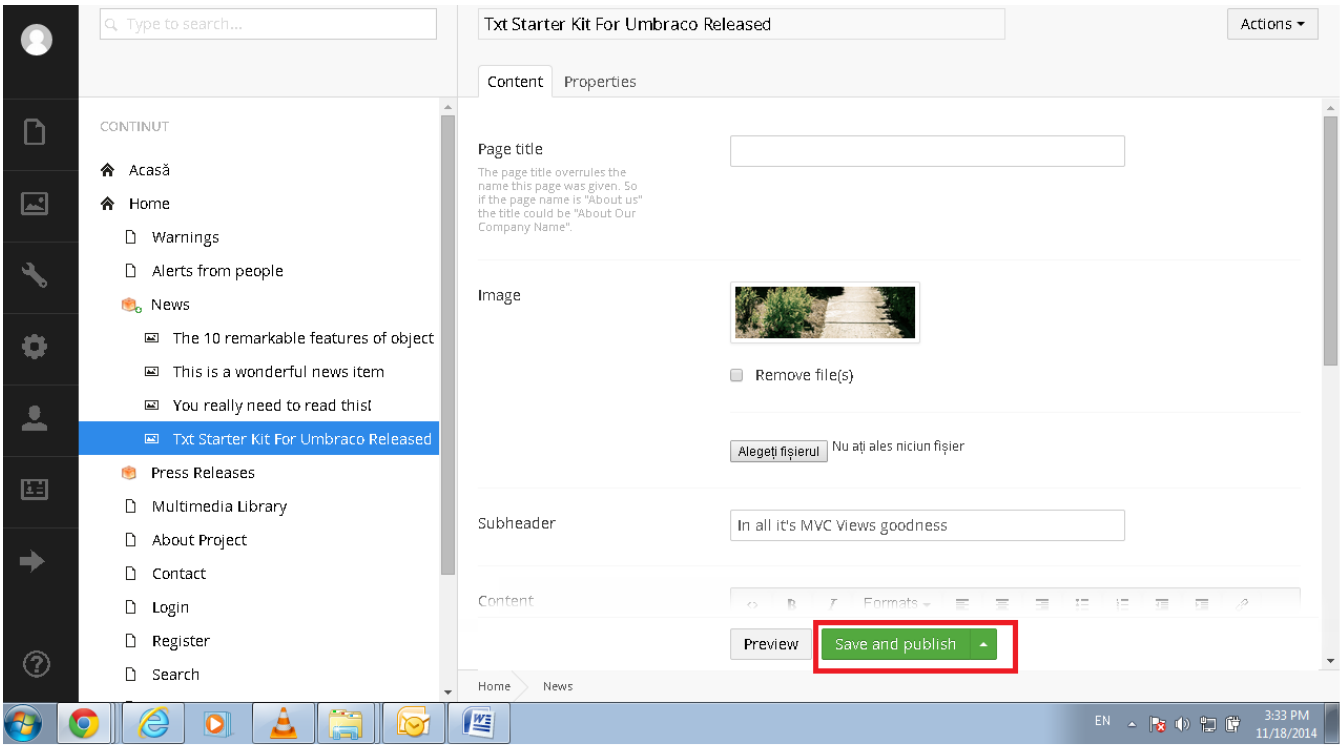

Figure 3.5. - 2 – Comment and picture attached on article

User saves and publishes information added by click on the Save and publish button.

Txt Starter Kit For Umbraco Released
Last Updated: Thursday, 18 September 2014, 18:42
Sed ad haec, nisi molestum est, habeo quae velim. Neque enim disputari sine reprehensione nec cum iracundia aut pertinacia recte disputari potest. Nec vero alia sunt quaerenda contra Carneadeam illam sententiam. Deinde disputat, quod cuiusque generis animantium statui deceat extremum. Facit igitur Lucius noster prudenter, qui audire de summo bono potissimum velit; Quis non odit sordidos, vanos, leves, futtiles?
Negat enim summo bono afferre incrementum diem. Haec mihi videtur delicatior, ut ita dicam, molliorque ratio, quam virtutis vis gravitasque postulat. Haec quo modo conveniant, non sane intellego. Quis enim confidit semper sibi illud stabile et firmum permansurum, quod fragile et caducum sit? Multoque hoc melius nos veriusque quam Stoici. Igitur neque stultorum

Figure 3.5. - 3 – Comment posted on the section News

3.5. ADD AND PUBLISH CONTENT MULTIMEDIA ON THE EXTERNAL PORTAL

External portal allows loading of multimedia files (images, documents, video files type). The user is connected to the platform and has right to edit/ publish multimedia content on external portal.
User accesses external link portal administration. The system displays the login page for the external portal administration. The user authenticates the login page to manage external portal.

The user selects the desired section to add and publish multimedia content. The system displays the selected section.

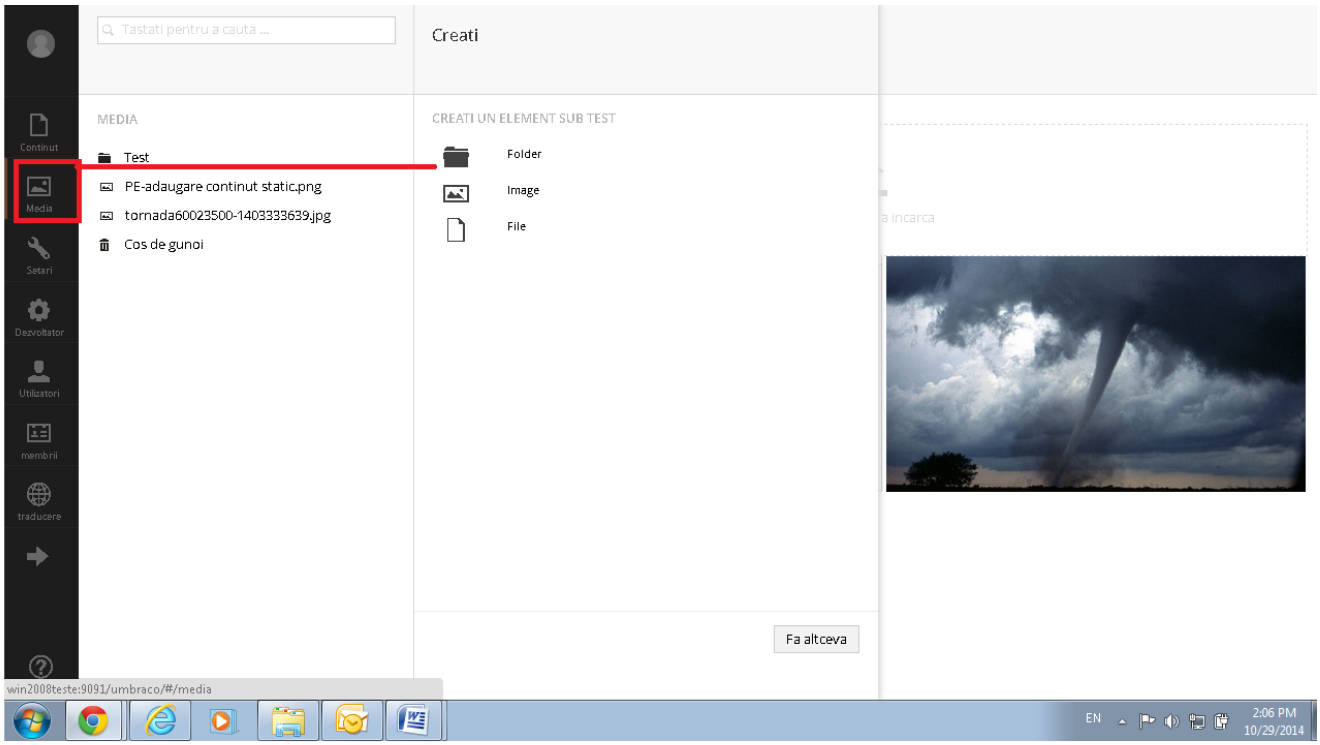

Figure 3.6. - 1 – Section Media

The user adds an item, load and save multimedia content information added.

The system saves the multimedia content added.

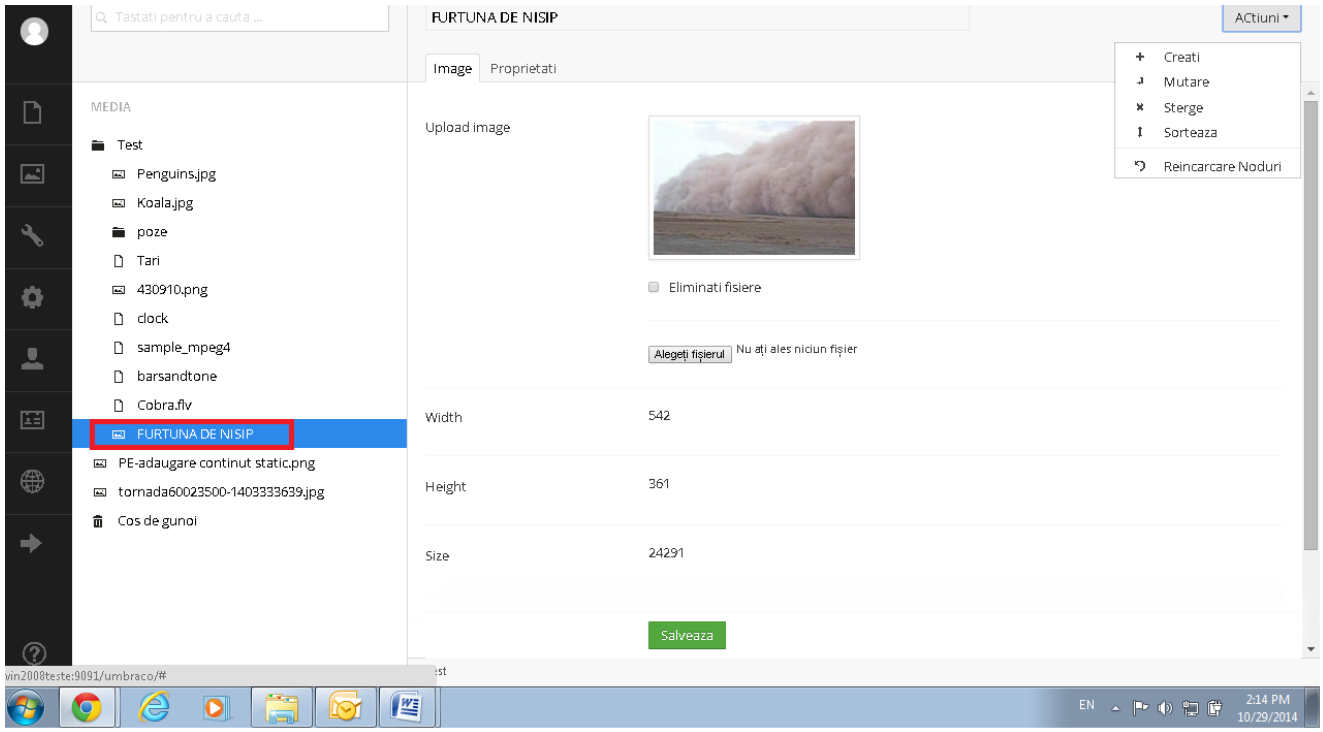

Figure 3.6. - 2 – Content multimedia saved

User saves and publishes the multimedia files added. Multimedia image files is added to the external public portal and is available for consultation.

Later the files can be deleted, or moved to another section sorted by user request.

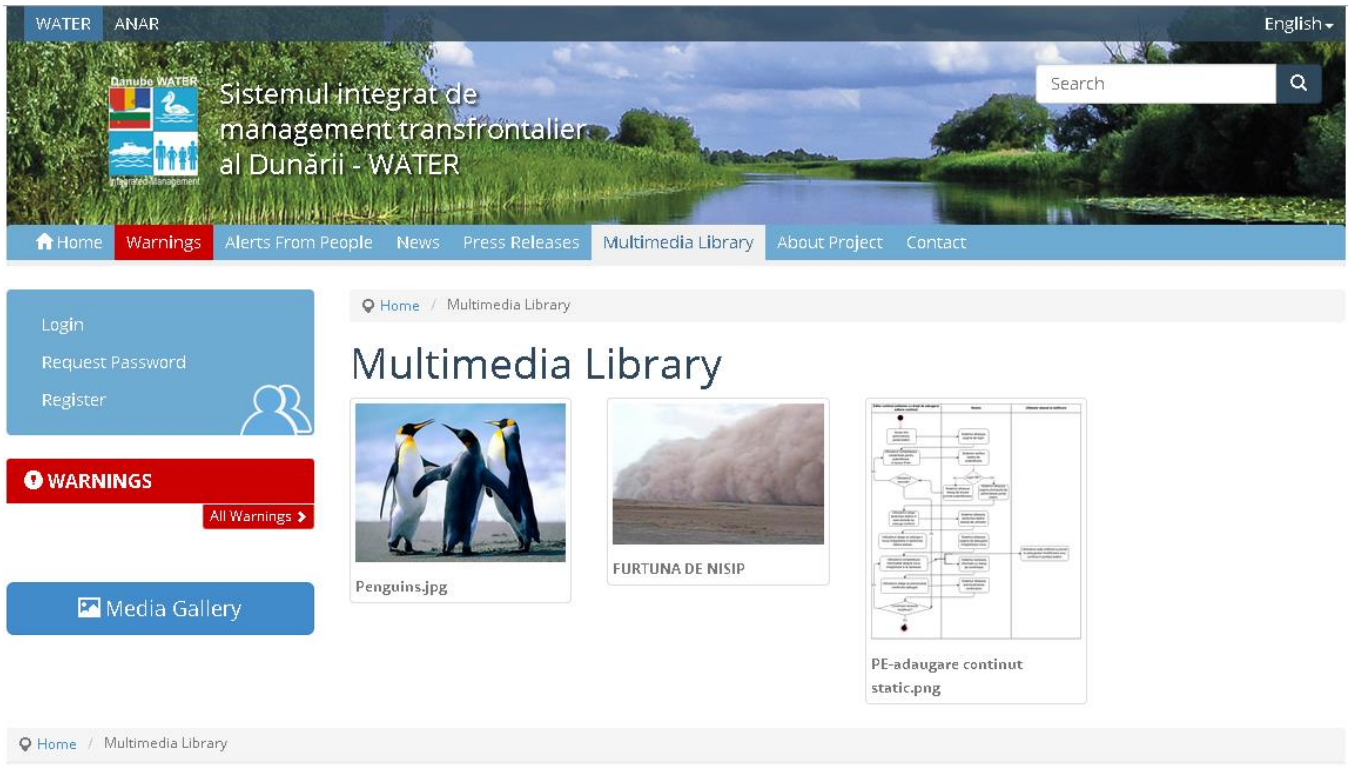

Figure 3.6. - 3 – Content multimedia posted on the external portal

4. CONTENT MANAGEMENT WEBSITES

4.1. ADD CONTENT OF DIFFERENT BULGARIAN WEBSITES

The informational content of each website, accessible from the external portal will be structured differently and configurable. Also, each partner will then manage his site.

Each website administrators can add and publish new sections within their own website using a predefined template list.

The user is connected to the platform and has right to edit/ add content on external portal.

List of predefined templates is available. User accesses external link portal administration. The system displays the login page for the external portal administration. The user authenticates the login page to manage external portal.

The user chooses the appropriate website (example, ANPM) that wants to add a new section.

The system displays the selected area.

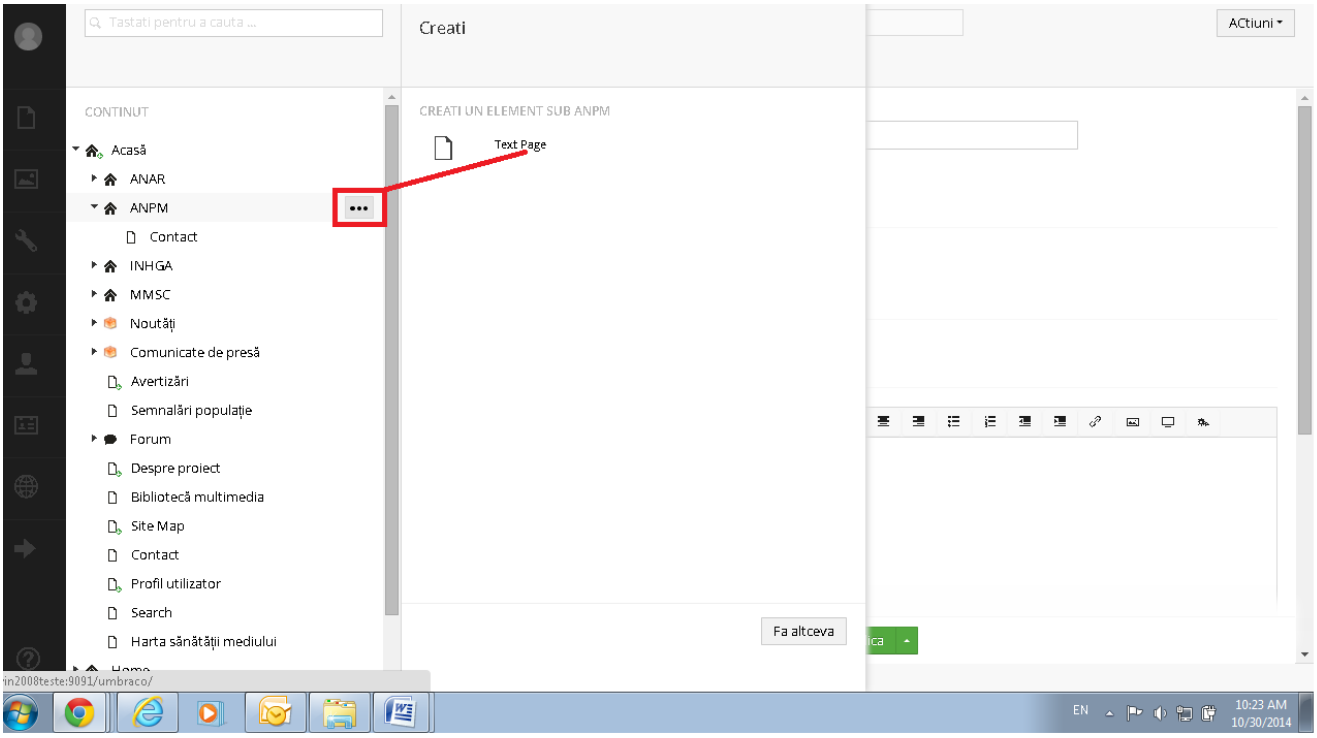

Figure 4.1. - 1 – Create new text page on website ANPM

The user adds the selected area of the ANPM website a new section using a template from the list.

The user completes data provided from template: new section title, content and click button Save and Publish.

The system saves and publishes section added.

TradingMaster turns weather data into actionable intelligence
30 OCT 2014
MeteoGroup TradingMaster
MOS Table
Region: Germany | Weather Parameter: Temperature | Display type: Max/Min forecast values | Last update: 07.10.2014 08:49:04 (UTC)
Last Updated: Thursday, 30 October 2014, 12:00
New MeteoGroup product offers fast access to critical information via a unique, personalised home screen
20th October 2014: TradingMaster has been developed by MeteoGroup to offer energy and commodities traders quick and easy access to the best short, medium and long-term weather data and forecasts in an online format conducive to the trading environment. Built based on detailed input from traders, analysts and meteorologists, it is intuitive and flexible to use and features a unique home screen which can be tailored to individual requirements. http://tradingmaster.meteogroup.com
The design supports fast loading retrieval of extensive weather information - visualised on maps, charts and graphs to provide a quick insight into forecasts and potential weather risks. Customising the home screen with personalised settings saves even more time by minimising the need to search for data.
Model data and accurate, comprehensive location-based weather forecasts can be sourced for any position, area, country or region in the world; along with regional solar and wind power output forecasts for Europe. Ensemble forecasts and clusters can be used to check weather trends and compare variations, shifts and confidence/risk levels. In addition, TradingMaster's digital data feed can be plugged into in-house models to create a one-stop shop. An international team of over 150 MeteoGroup meteorologists is available 24/7/365 for consultation and support.
"Due to its fundamental relationship with supply and demand, the weather has a decisive impact on the energy and commodities markets," commented Dennis Schulze, Chief Operating Office at MeteoGroup. "TradingMaster transforms complex meteorological data into easy to digest, actionable business intelligence to give traders a clear competitive advantage."
Home / Press Releases / PRESS RELEASE

Figure 4.1. - 4 – The information published on a different website

Similarly proceed to introduce new sections in websites for other partners (INHGA, DAPP and ANAR).

4.1.1. **DELETE SECTION FROM OTHER BULGARIAN WEBSITES**

The informational content of each website of interest, accessible from the external portal will be structured differently and configurable. Also, each partner will then manage your site.

Each website administrator will be able to eliminate the existing sections within its own site. The user is connected to the platform and has the right to edit / add content on external portal. Registration system exists in published status.
User accesses external link portal administration. The system displays the login page for managing external portal. The user authenticates to the login page for managing external portal.

The check credentials after validation displays management portal main page externally. User chooses static section that wants to remove it from the public, the website ANAR.

The static section displays user selected.

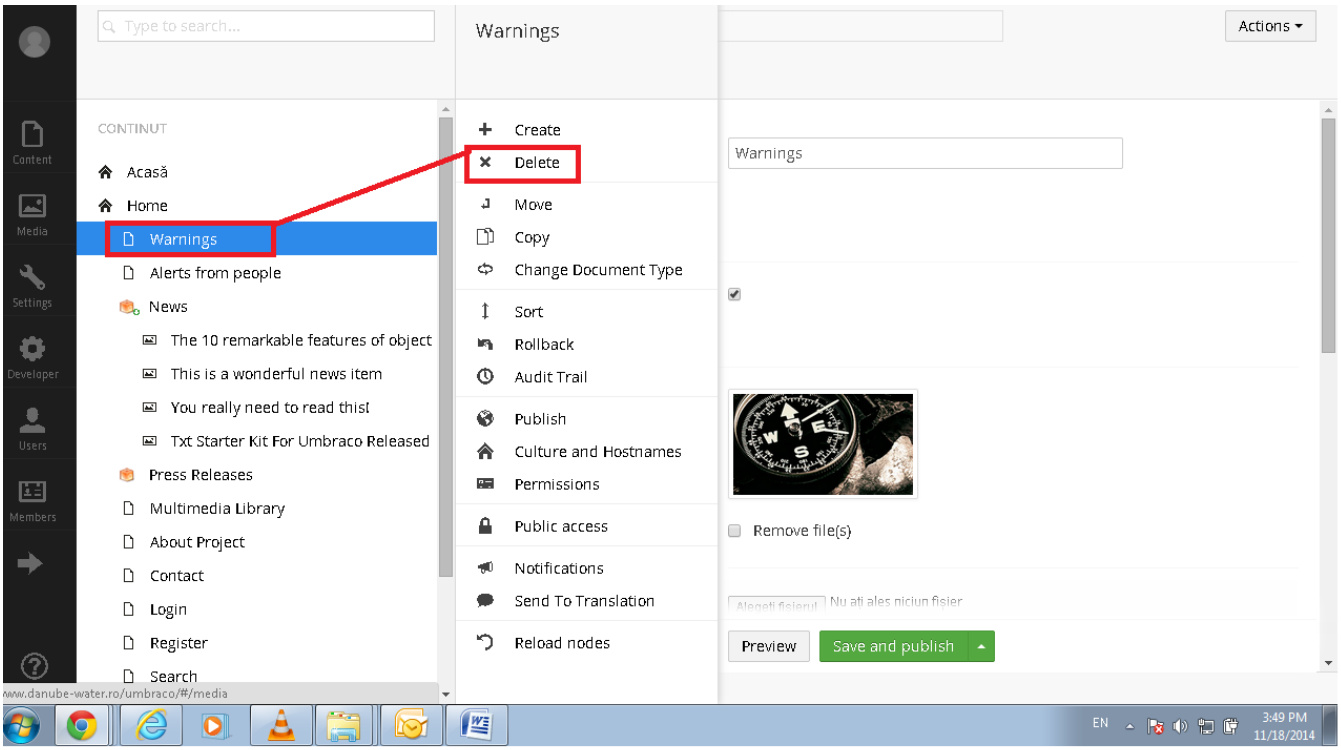

Figure 4.1.1. - 1 – Static section selected for deletion

The user delete section selected from the public area of the site and confirms the action by pressing OK button.

The system eliminates the public area user selected section.

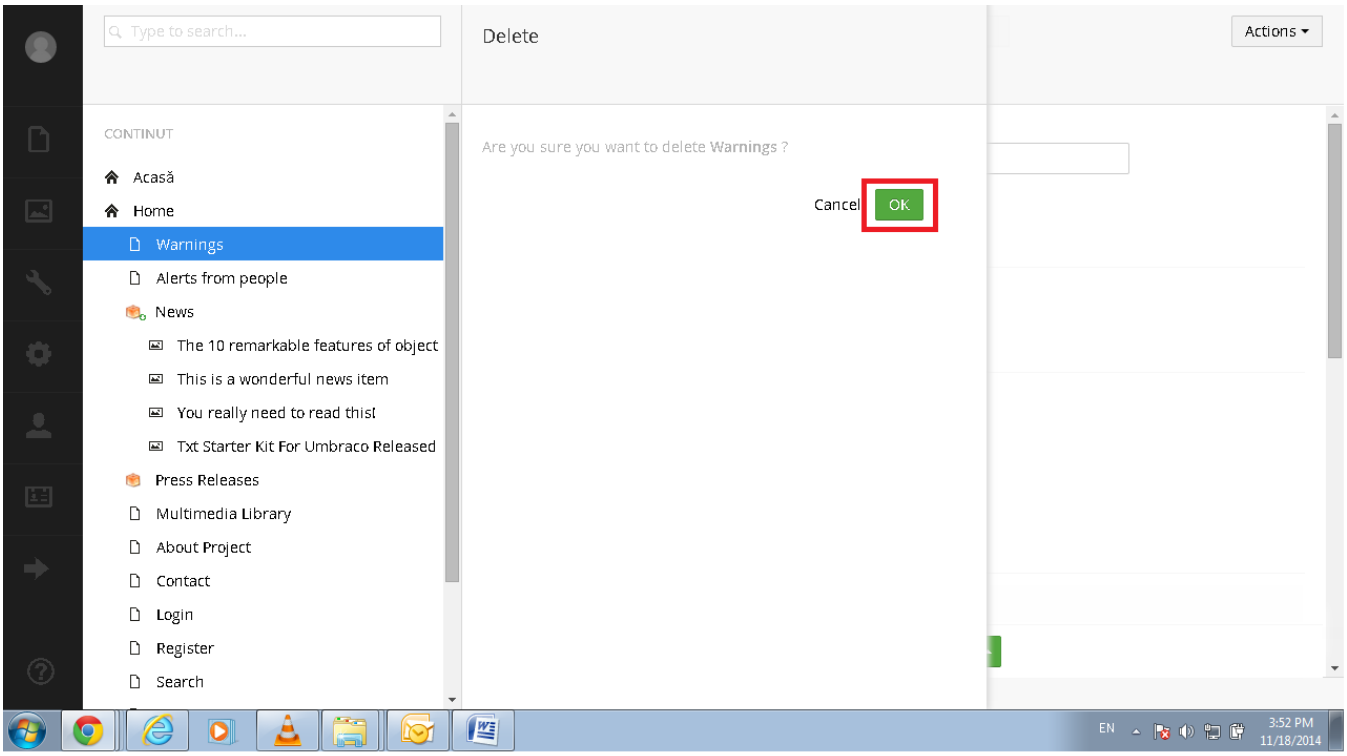

Figure 4.1.1. - 2 – Delete static section from website

Information is deleted/ removed from the external portal.

4.1.2. DEFINITION AND PUBLISHING SITE MAP

External portal provides the functionality of the "Site Map".

Site map is generated in the external portal, on the basis of the existing structure.

An administrator can publish the site map.
The administrator is connected to the platform and have right to edit/ add content on external portal.

User accesses external link portal administration. The system displays the login page for managing external portal. The administrator authenticates to the login page for managing external portal.

Administrator chooses Sitemap section. The system displays Sitemap section.

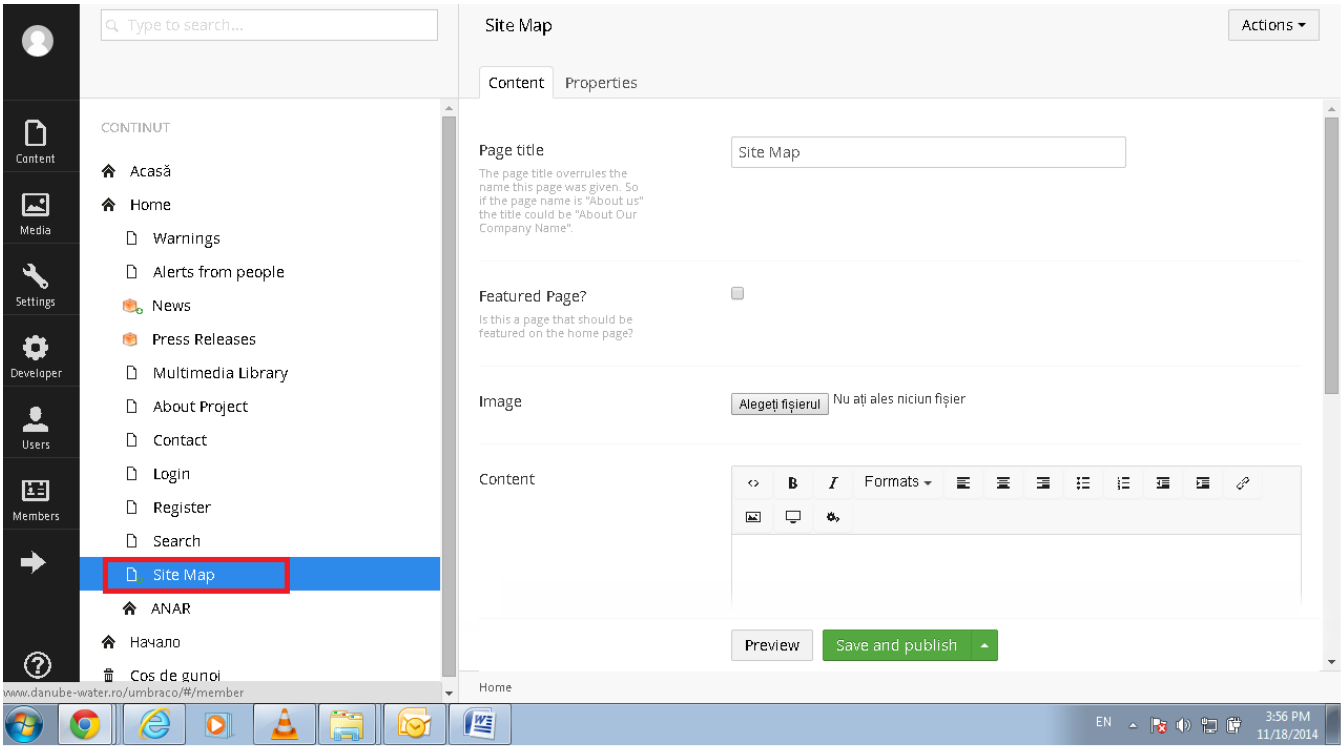

Figure 4.1.2. - 1 – Section Sitemap

Administrator click on the Save and Publish button.

System publish Sitemap in the public area.

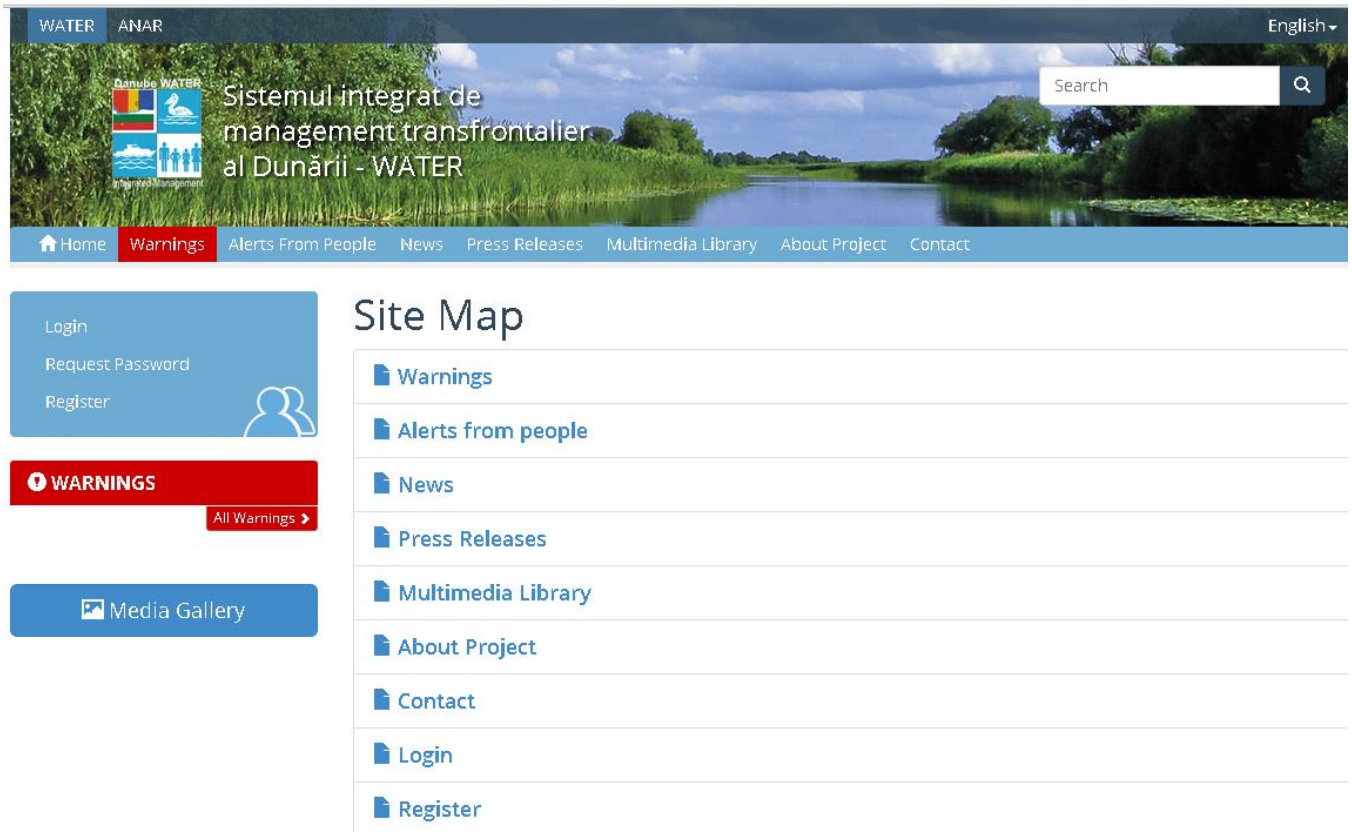

Figure 4.1.2. - 2 – Sitemap published on external portal

4.1.3. MOVE CONTENT WEBSITE INTO EXTERNAL PORTAL

External portal provides support for moving information between sections. The user is connected to the platform and has the right to edit / add content on external portal. The sections are available and contained the same type. User accesses external link portal administration. The system displays the login page for the external portal administration. The user authenticates the login page to manage external portal.

The user chooses which section wants to move. The system displays the selected section.

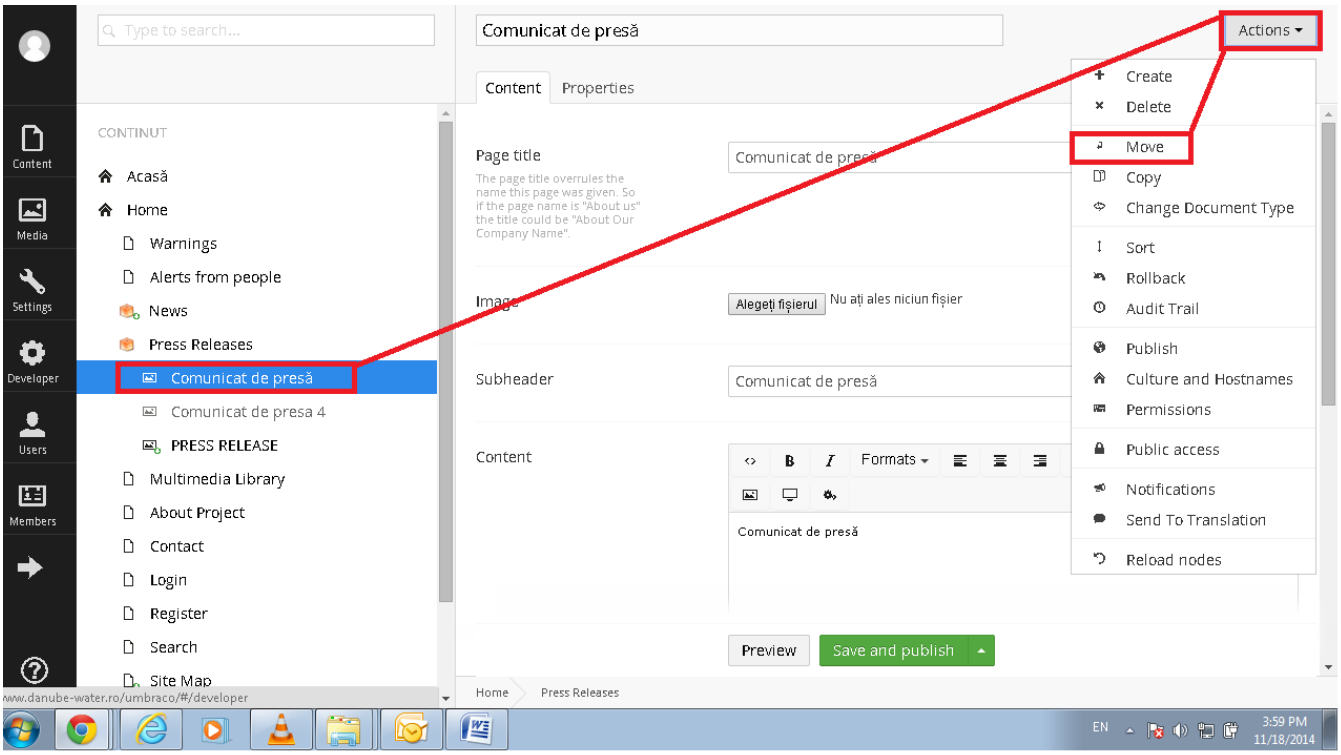

Figure 4.1.3. - 1 – Select content to move into static section

The user selects a record, in our case, a Press Release. The system displays the selected record.

The user choose to move a registration from static section Press Releases and it moves and confirm the action by pressing Move button selected in the image above.

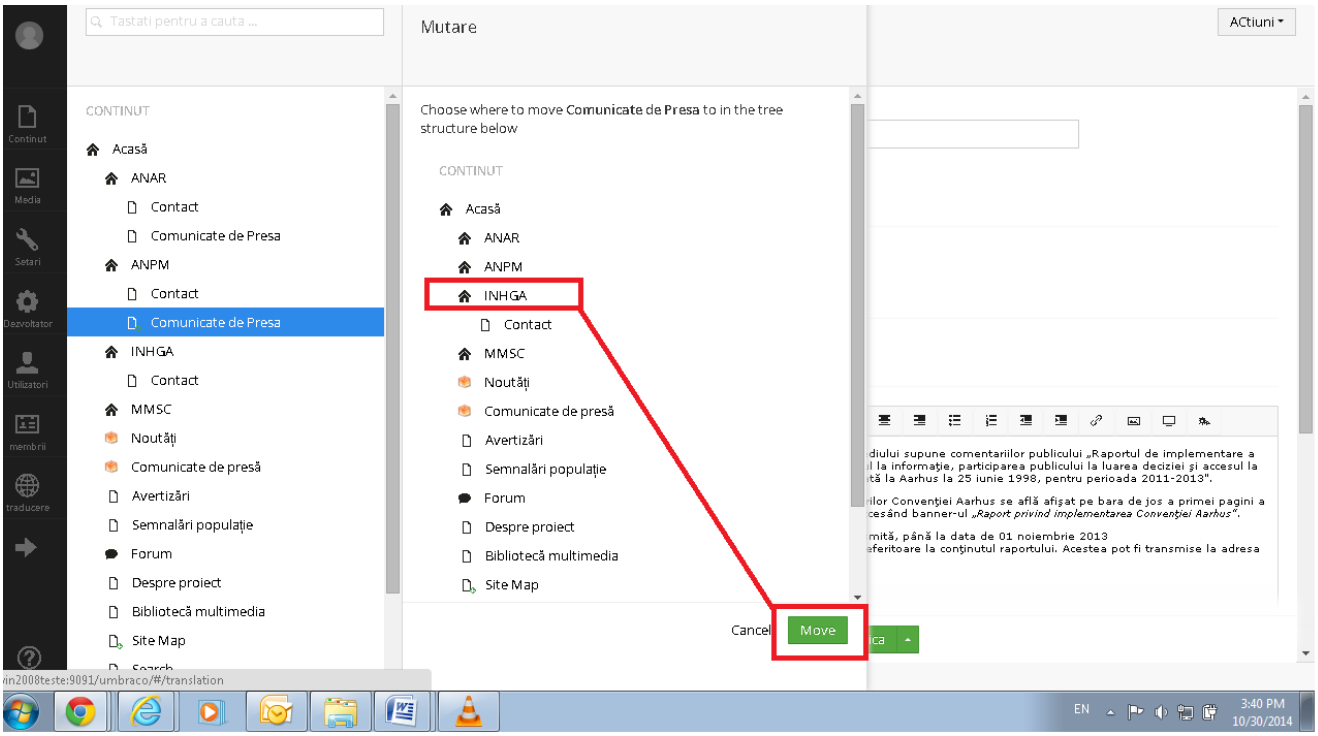

Figure 4.1.3. - 2 – Move window

The system records the move operation and issue confirmation message "Press Release was moved underneath INHGA", as shown below:

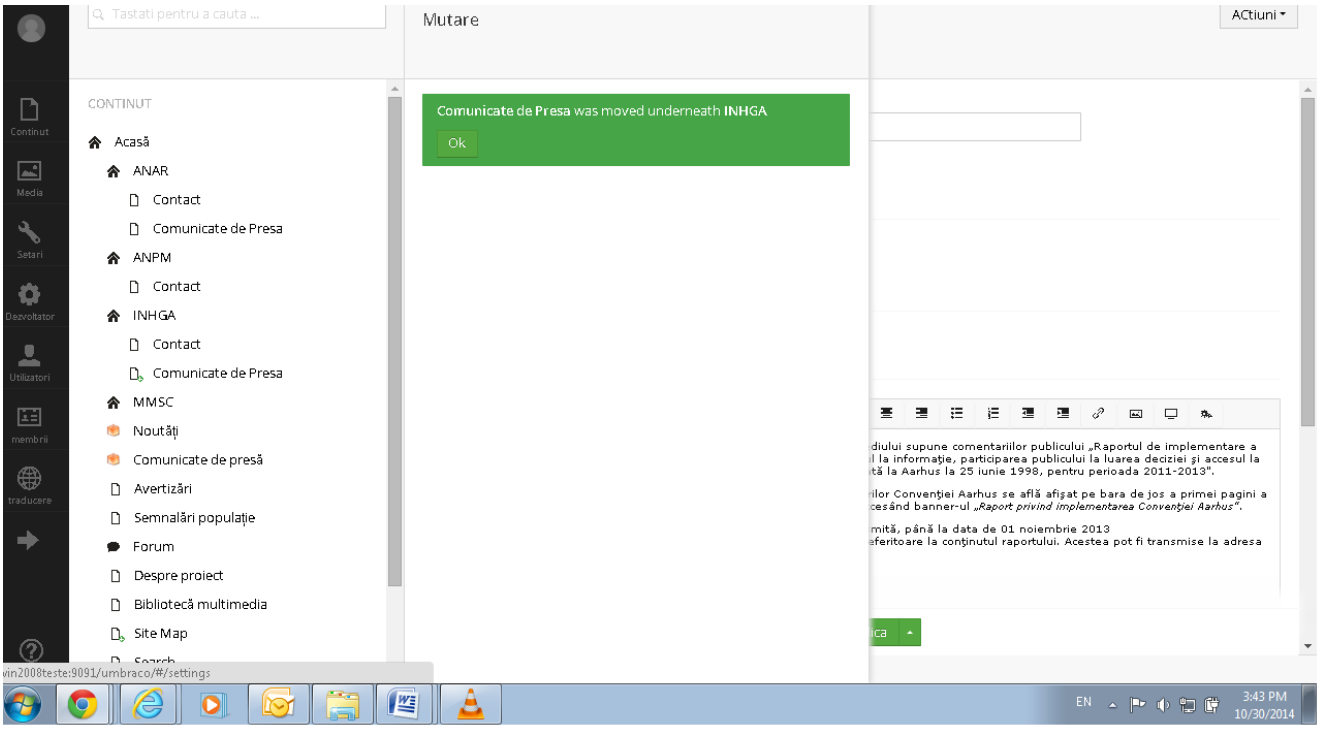

Figure 4.1.3. - 3 – Confirmation message of content moved

The user presses the OK button and the system performs the actual move.

4.2. ADD AND PUBLISH CONTENT IN ENGLISH/ BULGARIAN

External portal will be available in three languages: Romanian, Bulgarian and English.

Bulgarian and English language content will be added in specific sectors, for which there is content available in these languages.
The user is connected to the platform and has the right to edit / add content on external portal. Sections English/ Bulgarian are available.
